90 Final Analysis

I recently came across AP's motto in our first-ever issue – *Viresque acquirit eundo* – a quote from Roman poet Virgil's *The Aeneid*. Roughly translated, it means: 'She gathers strength as she goes'.

Our first issue was only 14 pages, and just like photography, we have developed and grown over the years. Looking for ways to evolve AP, we realised that you, our readers, could help shape

our title, so that AP remains the UK's best photographic magazine. At the centre of this week's issue, you'll find our reader survey, which I would ask you all to fill in and return to us. Alternatively, you can fill it in online at www.amateurphotographer.co.uk/survey. All entries will be included in a prize draw to win a Canon PowerShot SX520 HS, worth £299.

Thank you in advance for your contributions and good luck in the prize draw!

Richard Sibley, deputy editor

ONLINE PICTURE OF THE WEEK

© IZA AND DAREK MITRĘGA

Bukówka by Iza and Darek Mitręga

Canon EOS 50D, 100-400mm, 1/3200 at f/16, ISO 250

This image by Iza and Darek Mitręga – otherwise known as Bonnie and Clyde Creative Images – was taken from our Facebook page.

'This picture was taken in the south-west of Poland on a lake called Bukówka, which is one of our absolute favourite locations,' they say. 'We found this scene in autumn of 2013, around the end of September. It

always seems to be misty in this location. When you have that and a truly spectacular sunrise, you can capture some absolutely wonderful images. It also helps that there are anglers in their boats or pontoons to provide you with a lovely subject.'

If you'd like us to see your images, then feel free to upload them to our Facebook or Flickr pages.

Win!

Each week we will choose our favourite picture posted on the AP Facebook and Flickr communities and the AP forum. The winner will receive a year's digital subscription to AP worth £79.99.

Send us your pictures

If you'd like to see your work published in *Amateur Photographer*, here's how to send us your images:

Email Email a selection of low-res images (up to 5MB of attachments in total) to appicturedesk@timeinc.com.

CD/DVD Send us a disc of high-resolution JPEG, TIFF or PSD images (at least 2480 pixels along its longest length), with a contact sheet, to the address on page 20.

Via our online communities Post your pictures into our Flickr group, Facebook page or the gallery on our website. See details above.

Transparencies/prints Well-packaged prints or slides (without glass mounts) should be sent by Special Delivery, with a return SAE, to the address on page 20.

NEWS ROUND-UP

The week in brief, edited by Chris Cheesman

Cine lens

A new 10mm micro four thirds cine lens is released alongside a 77mm 0.4-1.8 variable ND filter. The SLR Magic lens offers a 20mm focal length (in 35mm terms) and an aperture equivalent to around f/1.8-1.9. It includes focus gearing and a silent, 'clickless' aperture ring. The 10mm T2.1 HyperPrime is due at the end of October, priced £699.

© DAVID GIBLER / CREATIVE COMMONS

Wikimedia mission

Wikimedia Commons is seeking photographers willing to supply openly licensed photographs of cultural heritage sights and significant historic buildings for its September competition. Prizes include a trip to Wikimania in Mexico City. Visit www.wikilovesmonuments.org.uk.

Android Olloclip

Olloclip's mobile photography lenses are no longer only for iPhones, following the launch of 4-in-1 Photo Lenses for Samsung Galaxy smartphones. The Olloclip 4-in-1 boasts four lenses: a fisheye, a wideangle and two macros (10x and 15x). Designed to fit into a pocket, lenses for the Samsung Galaxy S4 and S5 are both priced £59.99. Visit www.olloclip.com.

Zeiss Otus

The new short telephoto optic in Zeiss's Otus series is billed as a lens for all seasons. The Otus 85mm f/1.4 follows on from the Otus 55mm f/1.4, with a telephoto focal length. Available around now in EF and ZF mounts, it will cost £3,430.

Photogrammar

Images by Dorothea Lange and Walker Evans are among more than 170,000 photographs of America's Great Depression that have been indexed and archived. The photos, in Yale University's new Photogrammar project, were taken between 1935 and 1943. Users can search the collection by photographer, location or year. For more, visit photogrammar.yale.edu.

WEEKEND PROJECT

Get closer

WITH THE obvious exception of dedicated macro lenses, most optics don't feature a close focusing distance. However, with the addition of an extension tube it is possible to make the minimum focusing distance a lot closer. There are a variety of different adapters on offer, typically ranging from 8-35mm in length. The

longer the extension, the closer the focusing distance becomes. As these extension tubes do not feature any optical elements, they are relatively inexpensive, although those that feature autofocus can cost significantly more. So why not use an extension tube with one of your existing lenses to shoot some creative macro images.

1 Pairing extension tubes with wide-aperture prime lenses, such as the 50mm f/1.8, will allow a very shallow depth of field when shot wide open. So you can achieve sharp focus on subjects and blur the background extensively.

2 If you are shooting subjects with out-of-focus backgrounds, try manipulating the look in-camera using props and different types of light. Candles, LED lights, tin foil and highly textured surfaces all make excellent backgrounds.

BIG picture

Moscow Zoo celebrates its 150th birthday since its foundation in 1864

◀ In this image, taken by AFP and Getty photographer Vasily Maximov on 12 September 2014, a polar bear basks in the sun at Moscow Zoo. On 13-14 September, Moscow Zoo marked 150 years since being founded in 1864 by professor-biologists KF Rulje, SA Usov and AP Bogdanov, from Moscow State University. Moscow Zoo has more than 6,000 animals representing about 1,000 species, and covers an area of around 53 acres.

The zoo has found itself in the news recently as Russia's new trade sanctions against the West currently ban many foodstuffs from being imported, meaning keepers are urgently seeking to replace the imported meat, fish, fruit and vegetables on which many of the animals depend.

Words & numbers

Unpredictability. Accidents. Not good when you're engaging in, say, brain surgery, but when lighting... wonderful!

Joe McNally

American photographer

3 Focusing will often need to be precise, especially when using longer focal-length lenses. Try to keep the camera steady by using a good tripod and, where possible, use manual focusing with preview enlargements.

4 With subjects so close, the lens can often obstruct the on-camera flash and the light won't fall properly on the subject. Try using an off-camera flash, LED panel or macro ring light to illuminate the subject instead.

This shot was taken with a 50mm f/1.8 lens with a 14mm extension tube and lit from behind

\$1.2 million

Amount Getty Images has awarded photographers in grants to help them pursue projects over the past ten years

Canon EOS 7D Mark II

Michael Topham gets his hands on the new **Canon EOS 7D Mark II** and finds that speed and accuracy are the main upgrades

The camera features both SD card and CompactFlash slots

At a glance

- 20.2-million-pixel, APS-C-sized dual AF CMOS sensor
- Dual Digic 6 image processors
- 150,000-pixel RGB+IR metering system
- 1920 x 1080-pixel, 60p video
- Weather-sealed, magnesium-alloy build
- ISO 100-16,000 (expandable to ISO 51,200)
- Up to 10fps shooting
- £1,599 body only

Viewfinder

The EOS 7D Mark II's viewfinder has a 100% field of view with the option to overlay additional shooting information.

Shutter life

The shutter life of the EOS 7D Mark II has been tested up to 200,000 actuations – 50,000 more than the original EOS 7D.

GPS

With built-in GPS, the EOS 7D Mark II can record the precise location that an image is taken, making it easier to catalogue images.

USB 3.0

For fast transfer of images and video, and for tethered shooting, the camera has a USB 3.0 compatible socket.

Autofocus

HIGH burst speeds need top-notch autofocus to complement them, and it appears that Canon has outdone itself with the EOS 7D Mark II's new 65-point AF system. Whereas previous Canon AF systems have featured 19 cross-type AF points, in the EOS 7D Mark II, every single one of its AF points is a cross-type. The centre point offers dual cross-type focusing at f/2.8.

The AF system on the EOS 7D Mark II pulls in a fair few features from other Canon

DSLRs. It inherits the latest generation of AI Servo II from the EOS-1D X, and improves on the acceleration and deceleration tracking of moving subjects. It also borrows the six autofocus 'case studies' – AF settings that correspond to specific situations – from the EOS-1D X and EOS 5D Mark III.

A new AF selection lever allows the user to switch between AF modes without moving away from the viewfinder – a welcome addition that should make shooting a good deal more fluid.

The rear screen isn't touch-compatible

The body of the new EOS 7D Mark II is largely the same as its predecessor

THE CANON EOS 7D's reign as the flagship in Canon's APS-C DSLR line-up finally comes to an end as the firm announces its successor: the EOS 7D Mark II.

With this new release, Canon seems to be placing the emphasis very much on speed and accuracy. The EOS 7D Mark II boasts two Digic 6 image processors, which allow it to shoot at up to 10fps without any sacrifices in resolution.

The rest of the camera is able to keep up with this improved speed too. We haven't yet been able to test the write speeds of the EOS 7D Mark II, but Canon claims that it will be able to shoot 31raw files at 10fps before hitting the buffer, and that it'll be able to shoot JPEGs indefinitely (or until your card fills up).

The EOS 7D Mark II receives a boost in resolution over its predecessor – unsurprising given the five-year gap between them. Its APS-C CMOS sensor boasts a pixel count of 20.2 million – identical to that of the EOS 70D.

It also comes sporting a viewfinder with 100% coverage of the frame, which can overlay additional shooting info such as white balance, if the user desires, and features a useful levelling guide for straight shots. A new 150,000-pixel RGB+IR metering sensor has also been added for even more accurate exposures.

The EOS 7D Mark II is capable of recording movies in full HD (1920 x 1080 pixels), with a choice of frame rates

from 24p to 60p, and features a dedicated stereo mic input. It uses Dual Pixel CMOS AF technology for video focusing, borrowed from the EOS 70D.

Design and build

Design-wise, Canon hasn't made great strides on the original EOS 7D. The EOS 7D Mark II looks and feels very similar to its predecessor. However, there are a few refinements in the physical design that are worth looking at.

New to the EOS 7D Mark II is weather-sealing, which Canon says is second-best only to the EOS-1D X. The dimensions have also been altered slightly from the EOS 7D, allowing the EOS 7D Mark II to accept a new BG E-16 battery grip.

While it's nice to see a built-in interval timer and dual SD and CompactFlash card slots, it is a bit of a shame that we aren't seeing a touchscreen on the EOS 7D Mark II. A vari-angle screen would have been nice too, rather than the fixed version we've ended up with.

More surprising, though, is the lack of built-in Wi-Fi functionality. Seeing a DSLR released without Wi-Fi in 2014 is, to be honest, rather odd, and while the EOS 7D Mark II can be used with the WFT-E7 wireless file transmitter, this involves incurring an additional expense of a whopping £599.

The Canon EOS 7D Mark II is expected on shelves during the early weeks of November, priced £1,599 body only.

Viewpoint Lars Rehm

Despite its celebrated launch, Apple's iPhone 6 offers little for the photographer – disappointing considering how revolutionary it was when it was first unveiled seven years ago

When the original iPhone was launched in 2007, it was not only the first 'real' smartphone, but also cleared the way for mobile photography as we know it today. Yes, many phones had cameras before the iPhone, but only the Apple device's touch interface and operating system enabled the development of apps like Instagram or on-device editing. Since then, the compact-camera market has been shrinking rapidly and iPhone models are consistently topping the most popular camera rankings on Flickr, a platform that used to be dominated by DSLR photography. In short, the original iPhone was as revolutionary for photography as it was for mobile communications.

Now Apple has announced a new smartphone generation in the shape of the iPhone 6 and 6 Plus, and when looking at the new devices I cannot help but feel a sense of disappointment, especially from a photographic point of view. At-launch features, such as NFC, widgets or HD resolution, which have been around on other devices for years, are

'Apple has stuck with the 8-million-pixel resolution that has been around since the iPhone 4S'

touted as innovations and overall there is very little on the new iPhones that we've not seen before.

In the camera department, Apple has stuck with the 8-million-pixel resolution that has been around since the iPhone 4S, and the same tiny 1/3in sensor size used in the iPhone 5S. The front camera comes with a measly 1.2-million-pixel resolution, less than on most competitors' mid-range models, and the tiny flash LEDs are the same as before as well. Optical image stabilisation is now at least available on one of the new models – with its 5.5in screen, the bulky iPhone 6 Plus – but those who prefer a more compact device are still out of luck as the standard iPhone 6 does not come with this useful camera feature.

Better options for less

It is absolutely true that features and specifications alone do not necessarily make a good user experience. However, especially in the camera department, it is clear that certain hardware characteristics, such as larger sensors, more pixels for digital zooming and cropping, or optical image stabilisation have a positive impact on image quality, and many competing high-end smartphones offer some or all of those. Some models even come with raw capture or xenon flashes, making them the obvious choice over an Apple device for enthusiast photographers.

Don't get me wrong, the new iPhone almost certainly provides the same great user experience as previous models and is a very nice device to look at, but if you consider your smartphone to be another photographic tool in your bag, there are better options at a cheaper price. Am I going to get my credit card out and order one? Probably, yes. Is it rational decision? Probably not.

From a photographic angle, there is little on the new iPhone that has not been seen before

Lars Rehm is a freelance photographer and writer, contributing to publications in the US, UK and Germany. In his former role as part of DPR's testing team, he shot with countless digital cameras of all shapes and sizes, but nowadays he captures most of his images with a smartphone. New Books

The latest and best books from the world of photography. By Oliver Atwell

Anonymous Country: North Korea

by Julia Leeb, teNeues, £65, hardback, 224 pages, ISBN 978-3-8327-9843-7

IN RECENT years, as increasing official reports and first-hand stories are revealed, the secret state of North Korea has become a source of fascination for Western audiences. Countless books are now available and many more photographers are taking it upon

themselves to enter the country's borders and document the things they see. This latest volume from photojournalist Julia Leeb is certainly one of the most impressive. The book, at times, feels almost overwhelming in its scope. Leeb has successfully blended large-scale cultural events with quiet everyday scenes. As a result, we have a book that offers a relatively clear picture of life in North Korea. The large-scale nature of the book is crucial, particularly when it comes to the scenes of staggering architecture and massive synchronised dance spectacles. *Anonymous Country* is an impressive achievement. ★★★★★

On Composition and Improvisation

by Larry Fink, Aperture, £19.95, paperback, 128 pages, ISBN 978-1-59711-273-4

THIS book, one of a new series from Aperture that asks top photographers for their core thinking on photographic practice, is typically leftfield in its approach. Larry Fink is a tenured professor of photography at Bard College in New York State, and a prolific documentary photographer.

He has developed a robust and radical method of using flash and his images carry an aura of vibrant energy, one that the accomplished handling of his artificial lighting complements rather than overwhelms. It can be easy to become lost in the swamp of action in his images but – and this is where the fantastic text comes in – you can see that even in his most improvised images, a clear sense of order prevails. Fink's book is an inspirational and vital guidebook for anyone looking to improve their photography. ★★★★★

Seal Season

David Tipling reveals how to get the best shots of these popular wildlife subjects

Out of the water they resemble beached torpedoes; below the surface, seals are the sleek ballerinas of the seas. In Britain, our two breeding species – the harbour or common seal and the grey seal – are popular subjects with photographers.

In summer, harbour seals come to shore to pup, usually from June. The adults then remain on the beach to moult, with good numbers remaining ashore, often until mid-September.

Grey seals pup a little later, in autumn. In Cornwall, seal births start in August, and as you move clockwise around the coast of the British Isles, pupping periods become progressively later. In Lincolnshire and Norfolk, where big grey seal colonies live, pupping happens from November through to mid-December.

Grey seal pups are engaging subjects with their big doleful eyes and white coat. The white 'baby' phase lasts just a few days until the seals start to moult and the mottled-grey adult coat begins to show. This starts around the face until by around their third or fourth week, the pups are starting to resemble adults in colour.

Mating game

The most dramatic photographic opportunities often come at the start of the mating season. Initially, the big bulls protect their females and cubs within a harem. This harem is important to the male as once the pups are weaned, females are then ready to mate. Mating can start in October in some parts of the country, continuing into late January at some east-coast colonies. I like to try to find animals

You'll need a long lens for some shots out at sea

David Tipling

David is one of the most widely published wildlife photographers in the world. His pictures have been used on hundreds of book and magazine covers.

www.davidthipling.com

KIT LIST

◀ Telephoto lens

If you are shooting breeding seals, then a telephoto lens upwards of 300mm will allow intimate shots without the risk of disturbance. This will also help to isolate the animal, so avoiding cluttered backgrounds.

Breeding grey seals
can make for dramatic
subject matter

ALL PICTURES © DAVID TIPPING

◀ Beanbag or tripod

When shooting low shots, you'll want to avoid getting your camera and lens covered in sand. I mount it on a tripod that has splayed legs, or use a beanbag for a flexible and quick-to-use support.

◀ Angled viewfinder

If you haven't got a flip-out screen, you can attach an angled viewfinder to many camera bodies. These really help when shooting low to the ground – they save strain on your neck and help to avoid wonky horizons.

◀ Telephoto zoom lens

A long telephoto zoom lens in the region of 80-400mm is ideal for seal photography. This is especially true when viewing them from a boat where there is little control as to how close or far from your subject you will be.

A seal pops its head out of the surf on the north Norfolk coast

Don't always go for the obvious shots

Get down low for a more engaging shooting angle that produces stronger images

➤ that are mating in the breaking surf as there is often a lot of aggression involved, which can lead to some dynamic pictures. Fights among bulls can be violent, with spectacular photography on offer as waves crash over the animals, though there are plenty of intimate moments to capture as well.

When photographing seals, I try to shoot as low as possible as a more intimate feel to the subject can be created when on their level. This can be achieved using a beanbag, or a tripod that allows its legs to be splayed

outwards. You can, of course, be inventive and find something washed up along the shore to rest your camera on. When shooting low to the ground, there are two things to watch out for that can ruin a shot: wonky horizons are a curse, while you should also check your backgrounds for unsightly out-of-focus seals that might be rendered as dark blobs.

I tend to wear chest waders or an overall. The waders stop your knees and thighs from becoming soaked, which, on a cold day on the east coast, ensures you are likely to

stay out shooting longer before running for home to warm up.

Right conditions

On a dull day, the North Sea can look grey and quite uninviting, so if you're shooting animals in the surf or when they're poking their heads above the waves, then I often find that a blue sky is best. That said, duller days are more suited to capturing those cute white pups, which are born below the high water mark on intertidal rocks and sandbanks.

100000+ DIGITAL MAGAZINES
WWW.PDFMAGAZINES.ORG

➤ Visiting colonies on sandy beaches in really wild weather can offer dramatic photography opportunities as well. Although your gear might take a hammering if unprotected, there are opportunities to create images of seals lying in a blizzard of blowing sand. When coupled with low autumn sun, this can achieve an especially dramatic effect.

Harbour seals offer more of a challenge for photography in Britain and are often more timid, so a more careful approach may be required. They can be found on rocks or sandbars at many coastal localities. Outside the breeding season, both species can be encountered on boat trips that run to seal colonies (see Blakeney Point and Farne Islands in the site guide on page 15). Boats can often get in very close to resting seals, while animals in the water are usually quite curious and readily approach boats. In situations like this, a telephoto zoom is often the best option.

DAVID'S TOP TIPS

Shoot low

This is my top tip for giving your seal images impact. Shooting from above, looking down, will create a more detached feel to your subject. Just don't lie close to breaking waves, as you may get yourself and your gear wet!

Depth of field

Play around with depth of field but check that the eyes are in sharp focus. Focusing on the tip of the nose instead will result in eyes that are not sharp. If shooting mother and pup, sufficient depth of field is essential to get features in focus.

Location guide

THERE are many great locations for photographing seals in the UK, but I've selected these three sites for their ease of access.

When photographing seals, please respect any requests to stay out of pupping areas or off beaches. Seals on a beach can easily be unsettled by photographers approaching too closely. If a seal starts to look up anxiously and move, then you are too close. By standing back and using a longer lens, you'll find that natural behaviour can be captured, including fights among bulls and tender moments between mother and pup. In short, move low and slow. The seals are not going to rush off anywhere, so taking time to get into an optimum position will pay dividends.

Donna Nook, Lincolnshire

1 This east-coast site is renowned for its large grey seal colony and is probably the best location in Britain for shooting this species. But be warned, it is very popular both with photographers and the public, as a wardened pupping area in the dunes allows very close views of adults and young. Access to the sandbanks is discouraged during the breeding season in case of disturbance, but by late December and by walking out to the sea, great opportunities can be enjoyed photographing adults fighting and mating in the surf.

Donna Nook is best visited in the week to avoid the crowds during the pupping

season. If walking out to the sea in late winter, then access is allowed only at weekends, as these sand flats are used as a bombing range during the week. A well-known photographer once needed a change of underwear after ignoring the red flags and causing a bombing run to be aborted! Visit www.lincstrust.org.uk/donna-nook for more details.

Blakeney Point, Norfolk

2 Another large colony that's wardened during the pupping season. Common seals can be seen here in summer and by mid-autumn the beach becomes crowded with grey seals. The rookery is roped off and by far the best way to photograph the colony is by boat. Seal trips run daily on high tides. Visit www.bishopsboats.com or www.sealtrips.co.uk and www.nationaltrust.org.uk/blakeney for further details.

Farne Islands, Northumberland

3 Grey seals can be enjoyed from boat trips during the summer. However, they are of short duration, since they are part of a longer tour visiting seabird colonies, and run in the middle of the day when light is at its harshest. The Farne Islands do, however, offer the best site in Britain to dive with grey seals, offering some outstanding underwater photography opportunities. Boats depart from Seahouses. Visit www.farne-islands.com for details.

Black & white

Seals on a beach or in the sea are not very colourful, so a picture may possess more impact if converted to black & white. This is especially true if shooting into the light, where you have nice textures on wet sand or highlighted whiskers.

Bad weather

If the weather forecast looks bad, then grab the opportunity. Seals in the surf in heavy seas or on a wind-blown beach can make far more dramatic pictures than shots taken on a perfect, still autumnal day, so embrace wild weather.

A wider view

Pack a wideangle lens for shooting the bigger picture. Whether a seal sprawled under a big sky or people viewing seals at a wardened colony, there are plenty of opportunities for using shorter lenses to help tell a story.

THE NIKON F HIGH SPEED SAPPORO CAMERA

In late 1971 the Nikon F High Speed camera was released. This motor drive permitted shooting up to seven frames per second (fps) and controlled by a button on the front switch unit; the reflex viewing mirror must be in the lock-up position and only shutter speeds 1/250 to 1/1000 sec. can be used. Shooting rates of two to four fps and single frame are governed by a second button at the rear of the unit. At two fps, permissible shutter speeds are 1/8 to 1/1000 sec.. At three and four fps, speeds are 1/125 to 1/1000. The Nikon F High Speed 7 fps was supplied with an optical zoom viewfinder which had a range of 135-300mm. Accessories include a battery pack, power cord and eye-level finder with an accessory shoe. The 7 fps version was Nikon's first High Speed Camera and was used at the Winter XI Olympic Winter Games held from 3rd to 13th February 1972 in Sapporo, Hokkaidō, Japan. Amongst collectors it has become known as the Nikon F High Speed Sapporo. According to our research, only 54 examples of this camera were made, making it one of the rarest and most desirable of all Nikon cameras.

LETTER OF THE WEEK

Subjective creativity

A couple of my fellow AP readers recently voiced their frustration at photographers who they see as being uninspired in their choice of subject or style. They are not alone in their feelings. I, too, have on numerous occasions sat back with a feeling of 'Groundhog Day' and a sense of deflation. It is very hard to be truly original. We all copy, create, emulate our peers and inspirations, it's inevitable. We should also bear in mind that an image, which to our eyes may seem little more than a pastiche, could in fact be the photographer in question's first attempts at this subject; a symbolic personal achievement.

The reality is there are only so many subjects and styles available. Yes, you may say that there are a huge number of differing places and ways to create an interesting capture, but we live in a world where more people than ever possess not only the equipment to take stunning photographs, but also the know-how. Add this to ever-increasing formats in which to display and therefore view said images, it's no wonder we are reaching saturation point. We are overloaded with imagery on a daily basis, much of which is similar due to being trend-based. It would be fascinating to know how

many of those who find photographs to have become samey are open-minded towards more 'creative' interpretations of photography – those using highly edited or modified images? I used to be more sceptical regarding 'fake' images, and there are still subjects I prefer to be rendered in a truer state, but if it helps to keep the love for photography going then I'm all for it.

There should always be something new to keep that inner, creative fire alive.

William Spencer, Devon

As a pastime that people do for the love of it, enthusiasts should be free to photograph whatever they like without external pressure to shoot in a particular style, or be original. When considering images for publication, we do give weight to originality, but also to more familiar themes if they're well executed. Whether this excellence is achieved purely in-camera or with the help of Photoshop is also a matter for personal choice. While professionals have clients to satisfy, the aim for the hobbyist should be simply to enjoy the journey and arrive at a pleasing destination – Nigel Atherton, Editor

In AP 14 June, we asked...

Do you have a location you never tire of going back to?

You answered...

A Yes	71%
B No	29%

What you said

'The Hermitage outside Dunkeld. The Falls of Bruar'
'Barcelona, New York, just about anywhere in Italy'
'The Pass of Killiecrankie and Queen's View, Pitlochry'
'Lyme Regis – I liked it so much I bought a house there'
'Zermatt in Switzerland for the Matterhorn'
'Kraków in Poland'
'Grasmere and Rydal Water, Lake District'
'Venice, although I can't afford to get there very often'
'Denmark Street, Hoxton, Shoreditch and Brick Lane'
'Always love going to Islay'
'The Thames around Oxford'
'Brecon Beacons/Bracelet Bay/Mumbles Head'

Join the debate on the AP forum

This week we ask

Is there still a need for a high-end DSLRs with APS-C-sized sensors?

Vote online www.amateurphotographer.co.uk

Guess the date

Win! Every week we post an old AP cover on our Facebook page and all you have to do is guess the issue date (day/month/year). The person who is closest to the exact date wins a year's digital subscription to AP, worth £79.99. To guess the date of this cover (above), head over to www.facebook.com/Amateur.photographer.magazine. Forum members can also enter via the Forum.

The 6 September issue's cover was from 7 November 1992. The winner is Paul Phillips from our Facebook page, who was closest with a guess of 31 October 1992.

Win!

With ultra-fast performance, the new Samsung 16GB EVO SD card, Class 10, Grade 1, offers up to 48MB/sec transfer speed and has a ten-year warranty. www.samsung.com

Full-frame convert

I read *Full-frame, half-price* (AP 6 September) with much interest, because I converted to full frame last January. My query relates to your choice of the three cameras included in this article. The Nikon D700 and the Sony Alpha 850 were both released in 2008. The Canon EOS 5D was released in 2005 and was replaced by the EOS 5D Mark II in 2008. Had you included the EOS 5D Mark II, then I believe this would have been a much fairer comparison. The article was aimed at people looking to upgrade to full frame from

APS-C and three years' of technical development, I'm sure you will agree, makes a substantial difference.

However, assuming someone already has an APS-C camera and more than one lens, then the choice of manufacturer is

somewhat narrowed. While the Nikon D700 is, to quote your own words, a highly sought-after DSLR that has held its value well, so is the EOS 5D Mark II. I believe you were correct to include the original EOS 5D in this article because it is still a very capable camera, great value for money, and an excellent purchase. I am guessing that the EOS 5D Mark II would have shifted the goalposts too far.

Lastly, not everybody feels the need for more than 3fps, video, Wi-Fi, GPS or live view. When the writer referred to the EOS 5D as 'nothing much to write home about',

➤ I quickly lost interest and turned the page. When at my local Tesco store, while my wife completes the mandatory three laps, I will still browse through AP, but I doubt I will be buying many, which is a shame.
Peter Gray, Dorset

We chose the original EOS 5D so we could hit a greater price-point range in the article, and at around £300, the EOS 5D represents the most affordable way into full frame. Of course, there are many other cameras we could have included for those with deeper pockets.

If you'd read the piece more carefully, you'd have noted that the writer was referring specifically to the EOS 5D's 230,000-dot, 2.5in LCD screen as 'nothing to write home about', not the camera itself. Perhaps a fourth lap of Tesco should be added in future to give you more reading time! – Nigel Atherton, Editor

Canon EOS 5D lenses

I read with interest the article *Full-frame half-price* in AP 6 September. I bought the Canon EOS 5D some time ago for the same reason. It's showing its age now, but I agree with most of what is said in the article. I have made 18x12in prints at 240ppi and am very pleased

with the quality of the prints. The only thing I would disagree with is if you are buying non-Canon lenses, they may not work with this camera. I bought a Sigma 28-70mm f/2.8 lens and keep getting an error message on the top LCD of the camera, but there is no problem with the Canon lens.

Harry Gilliland, Co Antrim

The firmware for some of the older Sigma lenses will need updating to work with some cameras. Chances are that this is one of them. A service of this lens, which includes updating the circuit, will cost £85.99 or £98.99, depending on the exact version of the lens. Whether or not this will make the lens work, I don't know. Visit www.sigma-imaging-uk.com/support for more details – Richard Sibley, deputy editor

Hanimex magic

I thought your readers might like to see a photograph (right) I took with a £100 Hanimex telephoto lens. It has a 3,000mm focal length on my Pentax K10D with a 2x converter.

The image quality was passable to begin with, but I decided to put it through a free trial version of ArcSoft. Other brands would do just

as well, I am sure. The result is certainly something I can use.

Thomas Latcham, via email

As our second-hand lenses supplement in last week's issue highlighted, there are some great second-hand lens bargains to be had if you look around. The results can be very good, as your image demonstrates – Nigel Atherton, Editor

Image quality was improved after a session with ArcSoft

SIGMA
105^{mm}
F2.8
EX DG OS HSM Macro

For Sigma, Canon, Nikon and Sony
Supplied with fitted padded case,
lens hood and APS-C lens hood adapter.

Fast aperture medium telephoto macro lens with a 1:1 maximum magnification also allowing a generous working distance.

Sigma's Optical Stabilisation allows the use of shutter speeds approximately 4 stops slower than would otherwise be possible. As the stabilisation effect is visible through the viewfinder, it aids composition and accurate focusing. SLD glass provides excellent control of aberrations and the floating inner focus system ensures high rendering throughout the focusing range. HSM provides quiet, high speed autofocus and allows full-time manual focus, even if the lens is set to the AF position. This lens has a rounded 9 blade diaphragm which creates an attractive blur to the out of focus areas. This also creates smooth, rounded out of focus highlights. The lens is compatible with Sigma's APO Tele converters allowing an even greater working distance or closer than 1:1 magnification.

Wolfe's world

At 63, **Art Wolfe** retains his boundless

energy and his passion for exploring and photographing the natural world. The key is to keep a positive outlook, he tells **David Clark**

Through his photography, Art Wolfe is on a mission to change the way we think about the world. At a time when negative stories fill the news and we're constantly being reminded of the damage being done by climate change, deforestation and plundering the Earth's resources, Wolfe's work strikes a positive and optimistic note.

'People live in a technologically driven world. Everything's cut and dried on the news, and they lose track that there are amazing things going on around the planet,' he says. 'I want to remind people that there are snow leopards stalking ibex in the Himalayas and whales are migrating. There are people cutting salt out of the middle of the Sahara

and carrying it south to Timbuktu, as they have for 500 years.

'People get demoralised because of the negative news. I tell people, once in a while, "Turn off the goddamn news, and go out and walk in a forest and reconnect with nature.'"

Wolfe has spent most of his life travelling the globe and has long been established as one of the superstars of nature photography. His career statistics speak for themselves: he has been a professional photographer for almost 40 years, has published more than 80 books, and taken over two million photographs. He spends around nine months of the year working in locations around the world, and his TV nature documentary

Gemsbok,
Namib-Naukluft
National Park,
Namibia

Above: Karo warriors, Omo River Valley, Ethiopia

Above right: African elephants, Okavango Delta, Botswana

series, *Travels to the Edge*, has been screened in more than 70 countries worldwide.

The source of Wolfe's prolific photographic output is his relentless desire to experience and create. 'I'm insatiable in what I want to see and do,' he says. 'I'm all the things that add up to a Type A compulsive person. I'm very organised and driven and I'm always making lists of what I want to do the next day or the next week.'

'In terms of my work, I learned at art school back in the 1970s that if you become too pleased with your work and sedentary, it's the kiss of death. Therefore, I've always evolved my work, never sitting happily with what I've achieved but always moving it forward, pushing things a little further. Finding a new way of showing an old subject, or finding a new subject, is kind of the juice that runs through my body.'

Now, at the age of 63, the Seattle-based Wolfe has produced what he calls his 'magnum opus', the 400-page book *Earth is My Witness*. He describes it as 'an encyclopaedic project of my best work over the past four decades'. Shot from the ground, the air and underwater in diverse environments around the world, it includes majestic landscapes, stunning wildlife shots, and fascinating portraits of remote tribes

'If you become too pleased with your work and sedentary, it's the kiss of death. I've always evolved my work'

of people living in traditional ways.

Wolfe is keen to point out that it's not a career retrospective, as he isn't quite ready to hang up his camera, but it is a look back over some of the highlights so far. 'When I've worked on books in the past, I've deliberately adopted a different style for a particular subject,' he says. 'For example, *Migrations* was about patterns in nature and *Vanishing Act* was about camouflage in the wild, and was shot using long, impressionistic exposures. This book

is a nice way of bringing all those different genres into one collection.'

Some of the pictures in the book are established Art Wolfe favourites, but there's also a substantial selection of new work. The reason for this mixture, he says, is that when he began collecting images for the book – some taken 20 or more years ago – he noticed a distinct difference in image quality between his film and digital work.

'Almost without exception, when I was comparing those film images

Above right: Young Jat women, Kutch, Gujarat, India

ALL IMAGES © ART WOLFE

Below right: Asaro mudmen, Eastern Highlands Province, Papua New Guinea

Aerial of camel train, Sahara desert, Morocco

with anything I've shot in the last six years, they fell down because digital capture is so much crisper,' he says.

Reshooting some subjects, such as tribes that have changed or to which access has been closed, was not possible. However, many of the landscapes and wildlife shots in the book were taken during the past two years. Wolfe hasn't returned to locations to simply copy what he did previously, but to shoot new work on the same subjects.

Digital capture, Wolfe says, has

profoundly affected the way he works in the field. 'Historically, if there was an amazing shot, I'd often put two rolls of film through the camera, with slight changes in how I captured it. Now, once I've verified I've got the shot, I move on to a different subject and the result is a more productive day. I'm shooting three times the number of subjects because I can move on quicker.

'Digital has also enabled me to capture subjects in ways I couldn't have done even three or four years

ago, such as cultures illuminated entirely by firelight without the use of flash. The sensitivity of the ISO now is permitting exposures that were only a fantasy a couple of years ago. It's really opened up a load of new possibilities.'

However, beyond saying that he shoots with a Canon EOS-1D X, Wolfe prefers to steer clear of discussions about equipment. 'When I lecture, I hardly mention cameras because I'm all about the image and the aesthetic,' he says. 'I find

➤ it inordinately boring when people start talking about the differences between Sony and Nikon and Canon. That's not where my interest lies.'

He's much more enthused about discussing the style and content of the images he shoots, and maintains that he now sees and photographs things that he would not have seen ten or even five years ago.

'Whether I'm in the mountains or in the city, I now look at the subject in much more graphic terms,' he says. 'I detach myself from the fact that I might be looking at wildlife, culture or landscape, and I start to see it in terms of graphic elements – positive and negative space, balance, the subtleties that people often don't see because they're so engaged with the subject.'

'I don't spend any more time photographing than I did before; I just go straight to the point. I look at form first and subject second. I'm also less concerned about the technical perfection of a digital capture and more concerned with the gut reaction that people have to an image.'

Wolfe continues to live life at a great pace and the next year or so includes a busy programme of seminars and photographic tours to destinations including the Antarctic, Myanmar, India and Namibia. Even for someone as well travelled as he is, there are still places on his to-visit list, including Spain, Israel and the Egyptian pyramids.

'I recognise now that there is a finite end to a life, which I didn't really perceive in my 30s,' he reflects. 'Now I'm in my 60s, I do recognise that the clock is ticking and there are a lot of places I want to see and a lot of things I still want to accomplish. Retirement is not a word I've ever associated with myself.'

AP

Earth is My Witness by Art Wolfe is published on 14 October by Insight Editions, priced £65. For more details, visit www.artwolfe.com or vimeo.com/83539841

Left: Emperor penguins, Antarctica

Snow-covered branches in front of a brightly coloured wall create a peaceful scene at the Koyasan Shingon Temples in Japan

ART WOLFE ON 'SPIRITUAL JOURNEY'

'MANY OF my images are completely candid and in the spirit of the moment, including most of the wildlife shots. Then there are other shots where I can see the potential for an image and I construct it, such as this one, which I call "Spiritual Journey".'

'In 2001, I spent five days in Uttar Pradesh, in northern India, and every day at a certain moment I saw the sun rise as a red orb above the Ganges. One evening, I saw somebody rowing along in a boat and I asked if they could come back to this exact spot an hour before sunrise. He (or she, I can't remember) was a pilgrim going to Kumbh Mela, the great gathering of Hindus, which happens every 12 years.'

'The next morning, they showed up and we virtually pulled the boat up into the

mud. Through an interpreter, I asked the person to remain perfectly still, as I had to take a 1sec exposure. I was using a neutral density filter aligned with the distant shore, and I used a polariser, which darkened the water at the foot of the picture. By darkening the water and taking the shine off it, it makes a nice contrast with the boat, but it also obscures the fact that the boat is in mud.'

'So the image is constructed in the sense that it wasn't just a candid snap, which would have been impossible to shoot. In a 5sec period, I got three shots – and this was with film – before the sun rose above that very thin layer of cloud and became too bright to include in the image.'

1 Fearghal
Breathnach
Ireland 50pts

Canon EOS5D Mark III,
100mm, 1/200sec at f/5,
ISO 800, flash

We were overwhelmed with entries for this round. Macro has always been a popular subject and as a result the strength of the images we received made our jobs all that harder. But here we are with Fearghal's perfectly captured handheld shot of a hoverfly. The

**1st
PRIZE**

colours are wonderful and the combination of flash and natural light has perfectly lit the scene. It's a truly beautiful shot.

1

2

2 Amy Whitewick
Wiltshire 49pts

Nikon D5100, 90mm, 1/4000sec at f/3, ISO 400

Amy had to wait over a hour to achieve this shot. It's a good thing she's patient, otherwise she would have missed this dreamy image. It's the colours that are the winning element here. The shades of the *Agapanthus* flower mimic the clear sky above. Also, Amy has timed her shot perfectly. It's a great capture.

**2nd
PRIZE**

3

3 Gary Cox Gloucestershire 48pts

Canon EOS-1D Mark IV, 100mm, 1/400sec at f/6.3, ISO 125

A southern hawker dragonfly would be a fine subject in itself, but Gary has gone one up and produced a brilliantly composed scene. The reflection, the rotten log dividing the frame, the out-of-focus background and the colours are a wonderful combination. Gary's shot more than deserves a top three spot.

In association with
OLYMPUS

OM-D
REDUCED TO PERFECTION

APOY 2014 Amateur Photographer OF THE YEAR COMPETITION

MACRO WORLD

There were some stunning images for APOY round 6. We reveal the top 30 entries for **Macro World**

Fearghal Breathnach, from Wicklow in Ireland, is the winner of round 6, Macro World, of APOY 2014.

Fearghal will receive an Olympus OM-D E-M10 with a 14-42mm EZ Pancake zoom, a 45mm f/1.8 portrait lens, a 40-150mm zoom, a 9mm fisheye lens, a macro adapter and a street case in which to carry it all. That's a total retail price of £1,200.

The E-M10 has a 16.1-million-pixel, four thirds-sized CMOS sensor and a TruePic VII image-processing system. The 1.44-million-dot EVF displays a 100% field of view and has a 120fps refresh rate.

The 14-42mm EZ Pancake zoom lens is a slim and compact optic that is equivalent to a 28-84mm lens in the 35mm format. The 45mm f/1.8 portrait optic is ideal for low-light people shots without flash, while the 40-150mm zoom has high-speed AF and is optimised for movies and stills. The 9mm fisheye lens is ideal for capturing wideangle scenes.

Our second-placed winner is Amy Whitewick, from Melksham in Wiltshire. She will receive an Olympus Pen E-PL5 camera plus a 14-42mm and 40-150mm twin-lens zoom kit worth £500.

The E-PL5 offers serious image quality with its powerful 16.1-million-pixel sensor and a new OM-D component in the TruePic VI image processor. The camera has lightning-fast autofocus, a touch-sensitive LCD screen and full HD video.

Gary Cox from Cirencester in Gloucestershire takes third place in this round. He wins an Olympus Stylus SP-100EE Ultra Zoom camera, with an impressive 16-million-pixel sensor and 3in LCD screen. The camera includes a handy autofocus lock so you need never lose a shot due to fuzzy focusing. The camera features a 50x optical Ultra Zoom lens with a focal length ranging from 24mm to 1,200mm, and built-in Dot Sight to make it easier to focus on subjects.

The 2014 leaderboard

Mark Helliwell has jumped up from fourth place to first place, replacing Angela Nelson who has moved down to third place. She's just one point below Dan Deakin, who remains in second place. Fearghal Breathnach, who has taken first prize in this round, has moved to tenth place overall.

1	Mark Helliwell	142pts	6	Sigita Playdon	107pts
2	Dan Deakin	136pts	7	Jevgenijs Scolokovs	102pts
3	Angela Nelson	135pts	8	Adrian Mills	100pts
4	Aaron Bennett	112pts	9	Gerard Sexton	98pts
5	Farid Sani	108pts	10	Fearghal Breathnach	92pts

4 Dariusz Jasiulek Poland 47pts

Canon EOS 600D, 100mm, 1/160sec at f/8, ISO 400, flash

Macro photography can show us familiar things and make them feel almost alien. The butterfly, water drops and colours are stunning

5 Adrian Mills France 46pts

Pentax K-5, 10mm, 1/50sec at f/8, ISO 200

This shot of a ladybird, called 'Straight to the Point', was definitely a standout due to the quirky nature of the scene

6 Stefano Coltelli Italy 45pts

Nikon D600, 210mm, 1/100sec at f/14, ISO 400

Stefano has got this shot exactly right. The composition and blurred background are perfect

7 Dave Allen Devon 44pts

Nikon D800, 105mm, 1/640sec at f/5, ISO 100

The *Cosmos* plant head has acted as a perfect frame for the central subject – the fly

8 David Tolliday Cheshire 43pts

Canon EOS 5D Mark III, 100mm, 1/800sec at f/4.5, ISO 400

This looks almost like a studio shot. In fact, this image was taken from the ground looking up using a light grey cloud as a background

9 Diogo Ferreira Portugal 42pts

Fujifilm FinePix S1000fd, fixed lens, 1/120sec at f/3.4, ISO 64

Converting to monochrome has emphasised the graphic qualities of the Bunny Tail grass

10 Mark Peacock Worcestershire 41pts

Canon PowerShot SX30 IS, fixed lens, 1/50sec at f/8, ISO 400

The beauty of this image is in its unfussy nature. The strength of the subject is enough

11 Barbara Corvino Italy 40pts

Sony Alpha 100, 75mm, 1/80sec at f/4, ISO 100

A little green aphid on a red rose shouldn't make a good subject for a photograph, but here Barbara has created an absolutely thrilling image

12 Christophe Lemieux France 39pts

Canon EOS 5D Mark II, 100mm, 1/125sec at f/6.3, ISO 320, flash, diffuser, reflector

This dramatic image of *Nephila* spiders fighting has been lent added drama by a flash and home-made diffuser

13 Adrian Holt Essex 38pts

Pentax K-r, 150mm, 1/80sec at f/11, ISO 200, flash, diffuser

Using a 30-year-old 50mm manual Pentax lens, plus 100mm tubes, Adrian was able to get up close and personal with this common spider

14 Lucie Brooke Greater London 37pts

Nikon D7000, 55mm, 6secs at f/9, ISO 100

Macro sees the things that the naked eye cannot, such as the fractal patterning of this willow leaf

15 Andrew Williams Australia 36pts

Canon EOS 500D, 60mm, 1/30sec at f/6.3, ISO 200

This was a shot that was pretty much guaranteed to get our attention. It's a fantastic and truly funny interpretation of the brief

16 Richard Craze Mid Glamorgan 35pts

Olympus OM-D E-M1, 12-40mm, 1/160sec at f/5, ISO 100

This incredible flower has lent itself well to macro photography. Up close, the flower looks like a galactic explosion

17 Mark Helliwell Cheshire 34pts

Nikon D800, 105mm, 1/8sec at f/29, ISO 400

A simple presentation is all that's needed for this spider suspended in its web. Removing the distraction of colour means the viewer can revel in the stunning body structure of the arachnid

18 Jim Tate London 33pts

Nikon D90, 90mm, 1/1250sec at f/8, ISO 320

Jim has got this shot exactly right in terms of focus. The head and eyes are pin sharp

19 Nick Davies South Wales 32pts

Nikon D3300, 18-55mm with extension tube, 0.6secs at f/18, ISO 100

Nick didn't use flash here – he employed an LED Lenser P3 torch to illuminate his subject

20 Maxim Dupliy Israel 31pts

Nikon D800, 60mm, 1/200sec at f/5, ISO 1000

There is a clear point of focus here, due to Maxim shooting at such an angle that the stems lead the viewer's eye into the shell

21 Chaitanya Deshpande London 30pts

Canon EOS 7D, 100mm, 1/320sec at f/3.5, ISO 320

By focusing on the web and droplets in the foreground and keeping the spider out of focus, Chaitanya has achieved real depth in the image

22 Csilla Szucs Somerset 29pts

Samsung NX200, 60mm, 1/60sec at f/32, ISO 400

By adding a little more contrast and darkening the background, Csilla has ensured that the glasswinged butterfly stands out in the frame

23 Alex Harford Staffordshire 28pts

Panasonic Lumix DMC-G6, 45mm, 1/80sec at f/3.5, ISO 160

Alex's image is a good demonstration of how macro photography can render the familiar abstract – here we see a butterfly wing

24 Mike Morley North Yorkshire 27pts

Canon EOS 5D Mark II, 100mm, 0.6secs at f/25, ISO 1600

This is beautiful. Mike has managed to capture the sunset and shadows reflected in the gloss of his car's paintwork

25 Andy Flowerday East Sussex 26pts

Pentax K10D, 90mm, 1/5sec at f/13, ISO 200

Evening Class

Photoshop guru **Martin Evening** sorts out your photo-editing and post-processing problems

Extending the canvas area

GUY PILKINGTON informs us that he took this photograph of a street sweeper on a recent trip to Cuba. It would have been nice if we could have seen more of the man's face, but the photograph still works well and has a lot of charm about it as it is. I especially like the rich colours, the texture of the walls and the doorway.

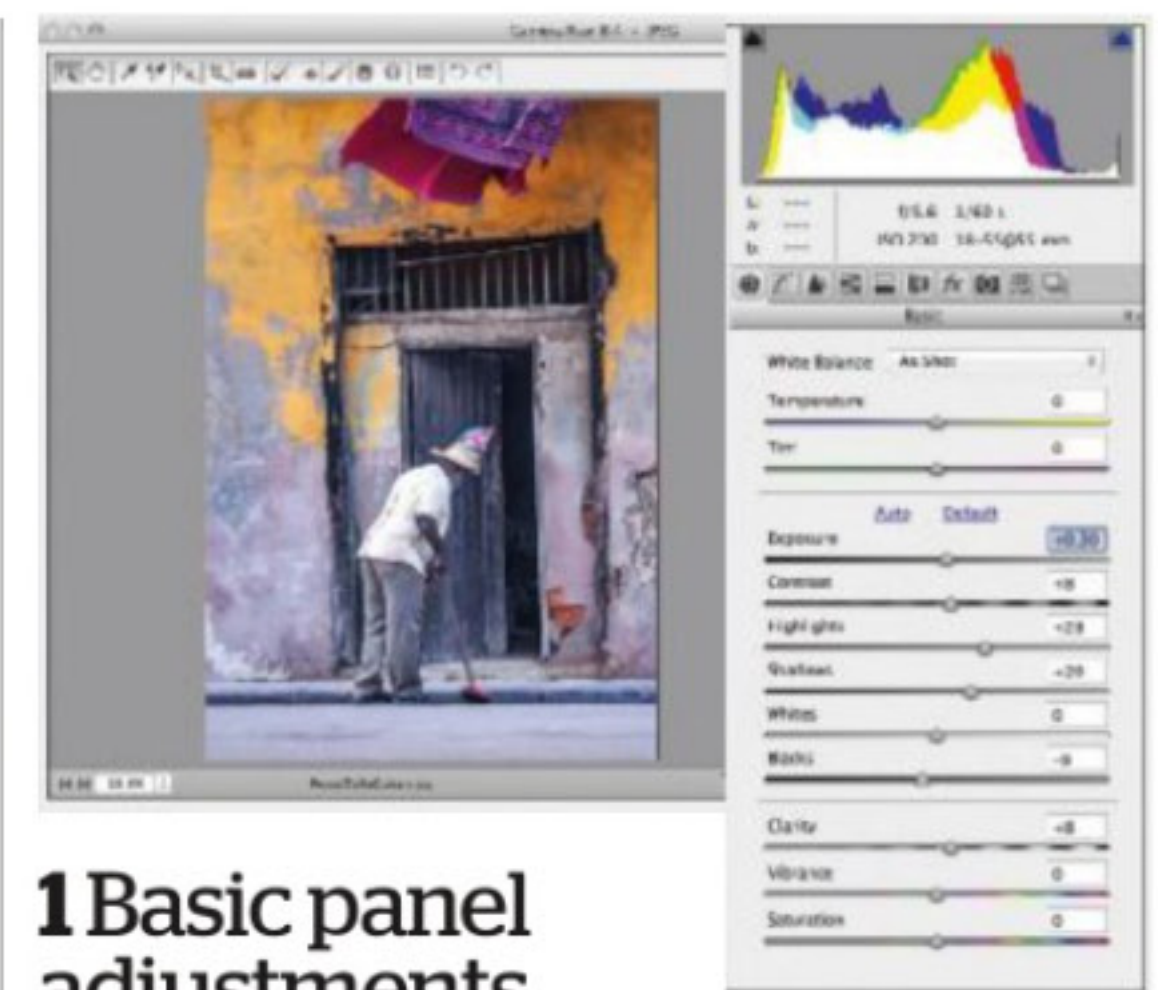

My only criticism is that the composition could have benefitted from having a bit more space. Of course, it is entirely possible that there was no option to include more space either side. However, with this particular travel image, one can use Content-Aware Scaling, (see page 36) to add more space either side

of the image without distorting the key areas of the photograph.

I should mention here that at step 3, I also happened to create a channel mask that roughly defined the doorway and selected this from the toolbar when applying the Content-Aware Scaling. Defining and then selecting a channel mask allows you to determine which parts of the scene need to be preserved absolutely.

Submit your images

Please see the 'Send us your pictures' section on page 3 for details or visit www.amateurphotographer.co.uk

1 Basic panel adjustments

In this first step, I opened the JPEG original via Camera Raw. Not too much work needed to be done here. Then I increased the Exposure slightly as well as the Highlights and Shadows sliders, and fine-tuned the Blacks slider, plus I added a small amount of Clarity.

2 Add more canvas

I then opened the image in Photoshop, where I double-clicked the Background layer to convert it to a regular Photoshop layer. Next, I selected the Crop tool and used this to expand the canvas size of the image, adding more space left and right.

3 Stretching the edges

I then went to the Edit menu and selected Content-Aware Scale. This added a bounding box to the image, and I could then stretch the layer by dragging the side handles. In this instance, I had made a selection of the doorway and saved this as a channel. I could therefore select this from the toolbar to ensure the doorway area remained unstretched.

Lightening an image

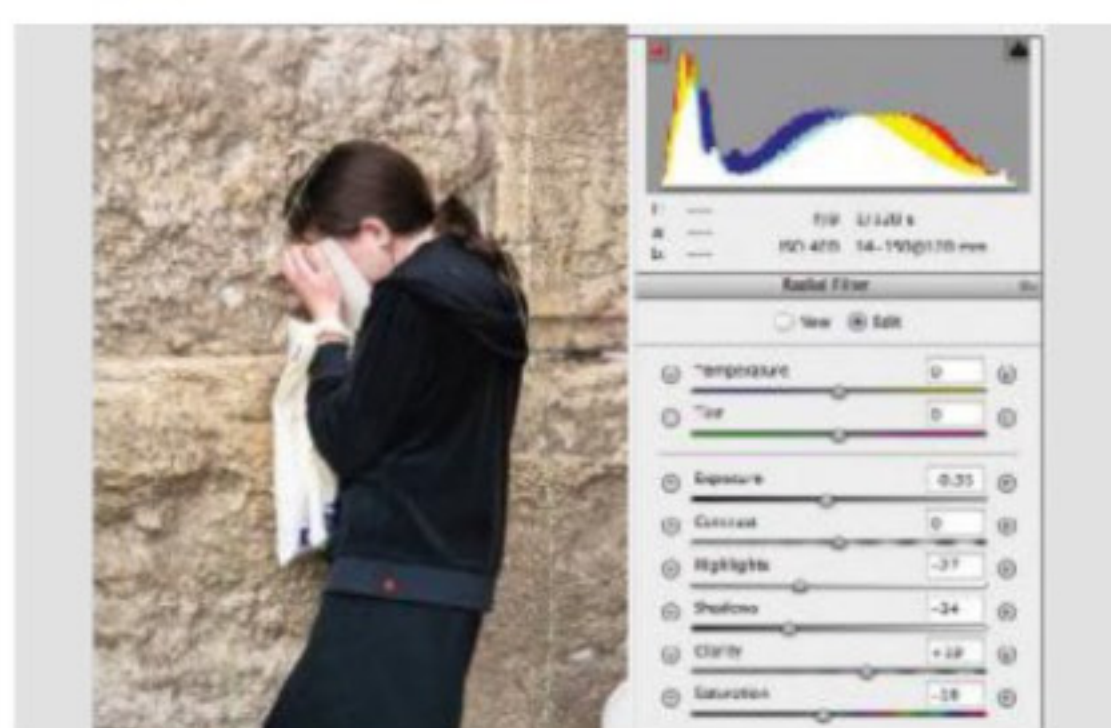

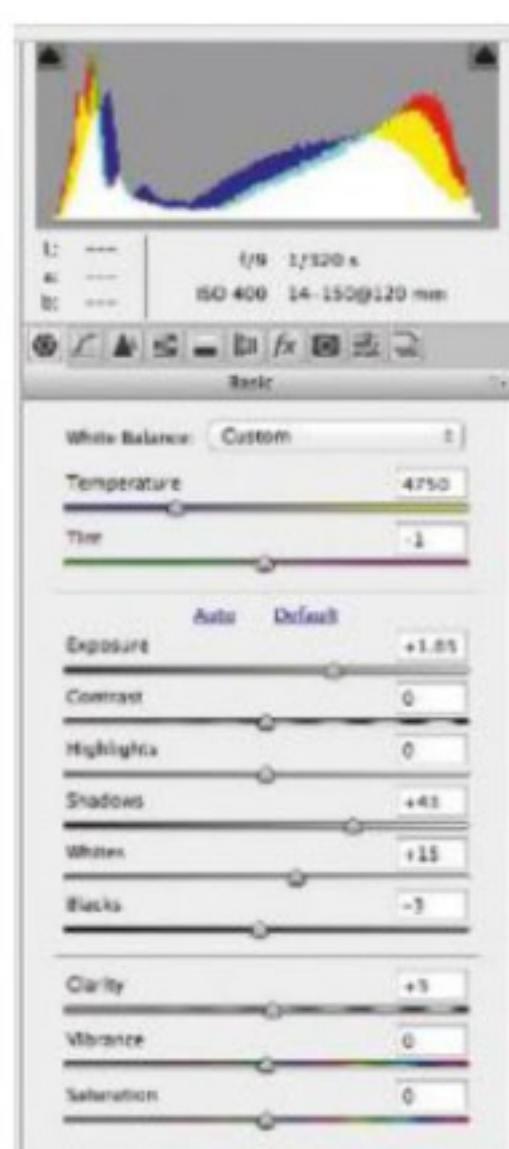

THE FIRST thing you notice about Jo Cope's photograph is that it's severely underexposed. That doesn't have to be a problem because one can easily fix it using Levels or Curves in Photoshop. What I did here, though, was to open the image via Camera Raw and apply a few Basic panel adjustments.

I also thought it best to get rid of the plastic chair that's in the corner. Now, if you were to classify this as a reportage photograph there are ethical considerations here as to what is and isn't acceptable retouching. It would be easy to use the Clone Stamp or Spot Healing Brush to remove this from the scene, but the photograph would then be regarded as being 'manipulated'. In this instance, I merely cropped the image to remove the chair and apart from that, I applied basic tone adjustments to correct the photograph, which is doing no more than could have been done previously in the darkroom.

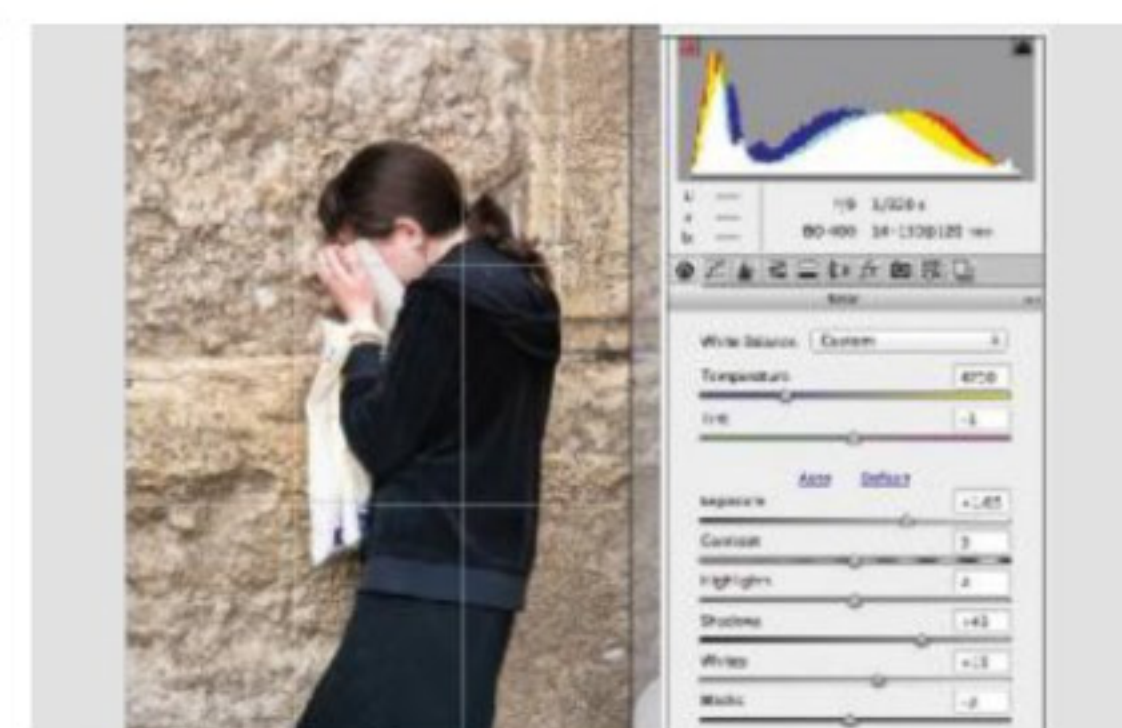

1 Exposure lightening

The most important step was to lighten the image. To do this, I opened the raw original via Camera Raw and applied a +1.65 Exposure adjustment. At the same time, I also lightened the shadow areas and fine-tuned the Whites and Blacks sliders to produce an image with a full, balanced range of tones.

2 Localised darkening

I then selected the Radial Filter adjustment and added a new radial filter in which the 'outside' area was made active. In this step, I applied a darkening adjustment to outside the figure to darken the surrounding area towards the edges. I also boosted the Clarity.

3 Cropping

Lastly, I selected the Crop tool and dragged across the image to define the area I wished to preserve. In this instance, all I wanted to do was to remove the plastic chair that could be seen in the bottom-right corner of the photograph.

BEFORE

AFTER

Content-Aware Scaling

THE CONTENT-Aware Scale feature is an interesting tool because it allows you to recompose photographs,

but without distorting the key elements within the image. For example, with a regular Transform adjustment you will

end up stretching/compressing everything to a uniform degree as you transform a photo. The Content-Aware Scale feature, however, is able to intelligently analyse the photograph and preserve the important areas

from being transformed and only allow the smooth areas of texture to be stretched. In the example shown here, I used this feature as a simple way to add more width either side of the boat, but without stretching the boat itself.

G-Dock ev with Thunderbolt - 2TB

£473 • www.g-technology.com

Jon Devo checks out G-Technology's latest external device and finds that it offers flexibility and speed

At a glance

- Two 1TB USB 3.0 drives
- Transfer data up to 10Gb/s
- Compatible with all other G-Drive ev products

BACKING UP and storing important image data is a critical requirement in any photographer's workflow. The G-Dock ev Thunderbolt drive from G-Technology provides expandable storage, with two interchangeable drives that can be configured either as Raid 0 or Raid 1.

With Raid 0, your data is split across the two drives, boosting performance. The drawback is that if one drive fails, the whole system can be affected and, in the worst-case scenario, vital data could be corrupted. Alternatively, the mirrored Raid 1 drive configuration means that if one drive fails, you have a copy of the data on the other drive – though you will be halving your capacity from 2TB to 1TB.

Verdict

The Raid 1 configuration still gave impressive data transfer speeds. I was able to transfer image files from a full high-speed 16GB UHS-I Class 3 SDXC memory card straight to the drive in around 4mins. In Raid 0, the same test took under half the time and about a minute when transferring the same data directly from the computer.

In our benchmark test of the Raid 1 configuration, the G-Dock ev showed 158MB/s read and 138MB/s average write speeds, but both figures were almost 100MB/s faster on average in the Raid 0 configuration. This drive offers good flexibility and superb data transfer speeds.

Portable data

The removable drives support SATA and USB 3.0 connections for portability, slotting in and out of compatible systems or via the supplied cables.

Dual Thunderbolt

Providing support for two Thunderbolt ports, G-Technology claims the G-Dock ev can deliver a top transfer rate of up to 10Gb/s.

Sleek and Strong

Housed inside a metal shell, the G-Dock ev makes a sturdy addition to your desktop. Drives reduce connector wear and tear.

Irista

● Free ● www.irista.com

IN A SIMILAR vein to photo community apps such as VSCO Cam, Irista from Canon is a browser-based personal photography library tool that makes it easy to upload and manage collections. It allows you to connect and upload your images in three different ways, either via desktop upload if you have an Apple computer running OS X 10.7 and above, via the website and by importing images from existing Facebook and Flickr accounts. Users get up to 10GB free just for signing up, and storage can be upgraded to either 50GB or 100GB for £4.49 and £9.99 per month respectively, or £45 and £99 on a yearly agreement. In theory, it is possible to browse your photos and filter them by a number of useful parameters, including camera and lens as well as date. Then you should be able to create albums from your batch uploads and share them directly to Facebook or Twitter.

The site looks relatively simple to use but it mysteriously refused to store my uploads, regardless of which browser I used or which computer I tried to upload the files from. As I've had mixed results with this site, I can't fully recommend this service, but give it a go for yourself and hope that you have better luck than I did.

Dust Snapper

● £30
● www.visibledust.com

IF YOU'RE confident enough to clean your valuable electronic equipment yourself, the Dust Snapper from sensor cleaning experts Visible Dust is an essential item that you should definitely consider adding to your cleaning kit. Cameras and lenses attract dust particles like biscuit crumbs to dark-coloured sweaters, so it's imperative that you can create as sterile an environment as possible in which to clean your equipment. While cleaning my camera equipment, I used the Dust Snapper as a base and found that the dust stuck to the pad as it was brushed off. Cleaning it is as simple as running it under water and blasting it with compressed air. This is a simple product that works as described and comes very recommended for cleaning purposes. **Jon Devo**

Ocean racing

Taking to the water is a challenging environment for a camera, as **Michael Topham** discovered when he put the **Olympus OM-D E-M1** through one of its toughest tests

As I reach for my iPhone to silence my 5.30am alarm and stumble over my bag to take my camera battery off-charge, it dawns on me that today's *In the field* is going to be a special experience. Pulling back the curtains in my hotel room, I breathe a sigh of relief for a clear start to the day that's blessed with a rich blue sky. With such a long and demanding day ahead, it's not long before I'm tucking into a bowl of porridge and knocking back a coffee to give my energy levels the boost they'll need, and then making my way to join the queue for the ferry bound for the Isle of Wight.

What's the reason behind this extremely early start? It just so happens to be Cowes Week – one of the world's longest-running regattas, which attracts the finest sailors from around the globe to race on the tricky waters of the Solent. Today I'm privileged to be joining eight yachtsmen that constitute the Dongfeng Race Team as they take on the Artemis Challenge – a 50-nautical-mile race around the island.

Before setting off for the south coast, I had to think long and hard about the best camera to take and

what conditions it might come up against. Most importantly, it had to be weather-sealed to survive a soaking from crashing waves or spray out at sea. Not that I can see that this would be an issue today, with the relatively calm sea conditions my catamaran ferry is thundering across. Secondly, and just as importantly, the camera has to be a fast and reliable performer to capture any spur-of-the-moment opportunities, while it must also feature a viewfinder and preferably have a tilting screen to assist in the taking of low and high-angle shots.

While there are many enthusiast and professional DSLRs that tick these boxes, the thought of carting around heavy lenses and constantly climbing up and down into the yachts' living quarters to swap them over swayed my decision towards a smaller system camera, and I settled for the Olympus OM-D E-M1 – a camera well geared for shooting action with its 10fps continuous shooting speed and 1/8000sec maximum shutter speed.

Thrown in at the deep end
As I climb aboard the Volvo Ocean 65 racing yacht, I'm introduced to

Yann Riou – the team's official reporter. As I explain my reasoning for bringing the E-M1 and the fact it has a strong magnesium body and as many as 60 gasket rings to make it as water-resistant as any DSLR, he grabs his camera – a Canon EOS 70D – to capture a shot of the crew assembling the mainsail ready for our imminent departure.

'Things happen quickly here,' he says, at which point I pull the E-M1 from my bag and opt to attach the 45mm f/1.8 M.Zuiko – a lens I'm a huge fan of for its compact size, pin-sharp results and the beautiful shallow depth of field it creates when used wide open. There's barely any time for me to get fully accustomed to the E-M1 again. It feels like I've been thrown in at the deep end.

As I lift the camera to my eye and begin taking my first portraits of the crew operating the winches, I'm given a gentle reminder of why I opted to bring the E-M1. The large electronic viewfinder (0.74x magnification in 35mm-equivalent terms) displays a crystal-clear image from corner to corner and refreshes at a blazing 120fps, helping to ensure there's barely any lag of fast-moving

The electronic level function was invaluable for capturing perfectly level horizons at sea

Attaching Panasonic's 7-14mm f/4 Lumix G Vario lens was ideal for squeezing more into the frame

ALL PICTURES © MICHAEL TOPHAM

The shallow depth of field created by the Olympus 45mm f/1.8 M.Zuiko lens is simply exquisite

Battery life

I'M ALWAYS slightly paranoid about battery time with CSCs. Since CSC cells are physically smaller than those found in DSLRs, they're notorious for running out of juice after around 300 shots. Two workaround solutions can be to carry a few spares or purchase a battery grip, with the latter having the advantage of improving stability and handling of the camera in the portrait format.

Unfortunately, with my confirmation to sail with the race team coming through so late, I regrettably didn't get a chance to source a HLD-7 battery grip (£179) or spare BLN-1 battery (£55), leaving me with little choice but to be economical with battery power and hope a single cell would see me through, which it did – just!

An inspection of my images

afterwards revealed I'd shot 370 images by opting to use the EVF instead of the screen, and by only wirelessly streaming images to my smartphone once, using the Wi-Fi functionality. Switching the camera off during the times when it wasn't being used also helped to preserve battery life, and the E-M1's incredibly quick start-up time meant there was barely any hesitation or delay between flicking the on/off switch and being able to fire the shutter.

The outlook on the approach to the start line for the 2014 Artemis Challenge Race

The E-M1 produces vibrant and punchy images, resulting in fast edits being made in Lightroom

subjects through the frame. The built-in eye sensor is sensitive too, though as I discovered by the end of the day, it's a fraction faster at switching the feed between the screen and the EVF than vice versa.

Although I'm shooting in raw and have the option to tweak the exposure later in post-production, some of my early backlit shots and their histograms reveal the electro selective pattern (ESP) metering mode is overexposing in the bright, high-contrast conditions I'm faced with. Just as you'd expect from a pro-level DSLR, the E-M1 has an exposure compensation range of $\pm 5\text{EV}$, but to resolve the issue I hold the metering button on the top-plate while using the front scroll dial to switch to centreweighted average metering mode. This instantly fixes my early exposure concerns, and with the five-dimensional image stabiliser deployed, I continue to rattle out a burst at 6.5fps, albeit 3.5fps slower than if the stabiliser is switched off.

A truly pocketable system

As we draw closer to the start line, I'm passed a jacket. I'm grateful for

its deep pockets, which are large enough to accommodate all the micro four thirds lenses I'm planning to use. Then, right on time, the countdown begins and we're off – the race is officially underway. As the crew set about their arduous tasks, I swap the 45mm prime for the wider Panasonic 7-14mm f/4 Lumix G Vario lens to squeeze as much of the yacht as possible into the frame. I notice the focal length of the lens is displayed as it's adjusted in the top-right corner of the viewfinder, to save glancing at the barrel of the lens – just one of the advantages of an EVF as opposed to the optical type.

A quick glance around the viewfinder display brings my attention to the natural picture mode icon, which reminds me I'm yet to experiment with the E-M1's art filters. Hitting the large OK button at the rear reveals the E-M1 has similar spongy buttons to its predecessor – the Olympus OM-D E-M5. That said, they're better placed and are larger too, making them much easier to find from behind the camera. The uncomfortable positioning of the playback button on the E-M5

grated on many photographers, but its placement on the E-M1, beside the main menu, is much better. As the quick menu loads on the 3in, 1.04-million-dot screen, I use the touchscreen to select picture mode.

Wi-Fi transfer for sharing

It's at this point I expected the camera to list the 12 filter effects to choose from, but no. Regrettably, the touchscreen isn't as advanced as those of other CSCs, and instead of being fully integrated with the menu and its options, its uses are far more restrictive. Forced to use the front scroll dial to select the dramatic tone black & white filter, and after rattling off a continuous burst of the crew as they prepare for another attack of the sail to keep us in contention with the leaders, I refer to the screen to double-check I'm shooting in raw and JPEG.

By recording raw and JPEG files simultaneously, it guarantees unprocessed colour images are being recorded, as well as the processed black & white JPEGs. The high-contrast mono shots with deep blacks and bright highlights look superb on the rear LCD, and I can't resist using the

camera's Wi-Fi functionality to immediately share some of my images with the world. In hindsight, it might have been an idea to download the Olympus Image Share app before we set sail, but thankfully I'm able to pick up a 3G signal on my iPhone.

App downloaded, camera and phone paired, I select multiple images I want to share and these transfer rapidly across to my camera roll in seconds. An image status update on Facebook and a couple of tweets later, and I'm back shooting again, albeit a little concerned that in the relatively short time of using Wi-Fi, it has drained the battery power from three bars down to two. Switching off Wi-Fi to help preserve battery life, I ask Charles (the team's skipper) how many hours of sailing remain before we get anywhere close to the finish line. 'About four,' he replies.

Glancing at the screen reveals I've taken 89 shots so far. Safe in the knowledge that the BLN-1 battery has a life of 350 shots, I've got some way to go before I deplete the battery altogether.

Two hours into the race, and just as we start to

Focal points

The Olympus OM-D E-M1 benefits from a snappy AF system with a total of 81 selectable points

Olympus dual fast AF system

The E-M1 benefits from a dual AF system, though phase-detection AF is only ever employed when users connect four thirds lenses to the camera via the MMF-3 adapter. Couple standard micro four thirds lenses with the camera (such as those used in this test), and the E-M1 relies on standard contrast-detection AF. Selection between the 81 AF points is incredibly quick – you can tap the touchscreen, use the rear four-way controls, or enter AF area via the quick menu and use the front command dial to move the AF point horizontally, or the rear command dial to move it vertically.

Art modes

The camera's art modes can be chosen by either switching the mode dial to its appropriate setting or scrolling through the picture modes with the front command dial. There are 12 modes in total, with the most effective being dramatic tone, diorama and pinhole. Hitting the right button on the rear four-way controller allows users to apply borders, or experiment with colour variations within each art mode.

Function buttons

The customisation of buttons is superb. Though there are only two dedicated function buttons on the body itself, positioned on the rear corner and the top-plate, most buttons can be reassigned to different tasks. For example, if you don't shoot much HD video, the movie-record button can be used to activate focus peaking, HDR or a range of other options instead.

Electronic viewfinder

The E-M1 improves on the EVF found in the E-M5, with the resolution jumping from 1.44 million dots to a significantly higher 2.36 million dots, which is identical to that of the VF-4 EVF as used with Olympus's Pen

series of CSCs. Not only that, but it also carries over the impressive 1.48x magnification (0.74x in 35mm-equivalent terms), which is only slightly bettered by the 0.77x magnification on the Fujifilm X-T1.

➤ navigate the famous Needles rocks at the western tip of the island, the crew scramble the mast to make adjustments to the sails. Flipping the screen out by 90°, I point the camera vertically and compose the image via live view, which allows me to capture the split-second shot I'm after.

It's also at this moment I appreciate the speed of the E-M1's contrast-detection AF system. Though the bright conditions aren't exactly a demanding test of its low-light capabilities, it locks on and confirms focus with a beep in a fraction of a second. It feels equally as fast as any enthusiast or semi-professional DSLR I've used.

Tapping the screen to take full advantage of the touch AF functionality, I also vary the size of the AF point using the scale at the side of the touchscreen before opting to fire the shutter with touch-shutter enabled. These settings, combined with the pop art filter, create a vibrant image and reiterates how sensitive and responsive the screen is to being fired by touch – ideal for fleeting moments that might require an instantaneous shutter release.

As we race side-by-side with the Artemis racing team, another photo opportunity presents itself as a crew member leans out across a boom to tweak the ropes. Arm at full stretch and with the camera strap wrapped around my wrist to prevent it falling into the turquoise waters below, I point and fire in the hope I get the composition about right. A quick review on-screen reveals my images are on a skew, but I've bagged the shot I'm after –

A screen that swivels as well as tilts would have made composition of this, and other awkward shots, much easier

something I'm happy to admit was more luck than judgement.

This gets me thinking about how the E-M1's screen could be improved. A vari-angle screen that has the ability to be angled in on itself, just like the type fitted to the Canon EOS 70D, would have certainly helped in this awkward shooting situation, also allowing me to view the electronic level and check the focus point was covering the subject, rather than guessing.

A few hours later and I'm still

finding out pros and cons as we draw closer to the finish line. The battery level has gone down by another bar, but the body remains just as comfortable to hold in the hand as it did for the first shot, which is testament to its large and fairly deep, curvaceous handgrip. The body isn't without battle scars, though, and on closer inspection a little paint has chipped off the scroll dials and beneath the corner function button. Added to this, the small rubber cover to protect the electronic contacts for the attachment of the battery grip has fallen off and been lost.

As our voyage around the island is completed and the team picks up a respectable second place in the monohull class, I review my images using the slideshow feature. Barely halfway through, the battery indicator flashes and moments later it runs out completely. A single battery got me through the five-hour sail, but only just!

Final thoughts

Though I'd like to say the E-M1 is 100% perfect, there are areas that could be improved to make operation a smoother and more pleasing experience. On the whole, it's enjoyable to use, but there were times during this test when I cursed the menu system for its lack of intuitiveness. The way the quick

menu isn't fully integrated with the touchscreen puts it behind some rivals, and what seems like an endless list of options in the custom menu could benefit from being better arranged. For instance, it took several minutes to work out that the level gauge has to be switched on within the info settings.

Menu and touchscreen functionality aside, it's an impressive performer and handles very well. There's no question it has a DSLR feel and character about it. That said, with £1,100 in my back pocket, would it be the camera body I'd buy if I were looking for a smaller and lighter alternative to my DSLR? There's no question of it not entering my top three – that's a given – and the superb range of micro four thirds lenses would sway me in favour of the E-M1 over the limited number of optics in the Sony Alpha 7 series.

However, choosing between the Olympus OM-D E-M1 and its closest rival, the excellent Fujifilm X-T1, is about as hard as camera decisions get. If I were to decide by flipping a coin, then my instinct would be to call heads for the X-T1, but then again, if it landed on tails, I wouldn't be disgruntled with the E-M1. It has its quirks, yet it continues to be one of the best micro four thirds cameras to date.

'There were times during this test when I cursed the menu for its lack of intuitiveness'

Complete our reader survey and you could **WIN** a **Canon PowerShot SX520 HS**

Dear AP reader,

Many thanks for subscribing to or buying this issue of *Amateur Photographer*. I hope you enjoy reading the magazine.

While we constantly look for ways to evolve our title, and bring you up-to-date news, reviews, information, tests and valuable second-hand equipment advertisements, we realise that we need to ask you some questions to help us continue to make AP the best photographic magazine.

All you have to do is fill in this form, cut it out and send it to us by 14 October 2014 – no stamp required. You can also visit www.amateurphotographer.co.uk/survey

to complete the online version.

All fully completed entries will be entered into a draw to win a Canon PowerShot SX520 HS. Built to help you tackle any situation, the SX520's 42x optical zoom lens is versatile enough to capture all subjects, from unmissable holidays to days out. With a 24mm wideangle lens, it offers the flexibility to capture sweeping vistas, while an impressive 1,008mm maximum focal length lets you zoom in on detail in the distance.

We look forward to hearing your thoughts and would like to thank you in advance for your contribution to AP's future.

Black & White	<input type="checkbox"/> 2	Macro	<input type="checkbox"/> 2
Documentary	<input type="checkbox"/> 3	Nude/figure	<input type="checkbox"/> 3
Fashion	<input type="checkbox"/> 4	Portrait	<input type="checkbox"/> 4
Film-making	<input type="checkbox"/> 5	Sports/action	<input type="checkbox"/> 5
Food	<input type="checkbox"/> 6	Still life	<input type="checkbox"/> 6
Gardening	<input type="checkbox"/> 7	Travel	<input type="checkbox"/> 7
History	<input type="checkbox"/> 8	Wildlife	<input type="checkbox"/> 8

10 How interested would you be in buying each of the following from Amateur Photographer?

	Very interested	Quite interested	Not very interested	Not at all interested
Books	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Magazine subscription	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Photography courses	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Photography holidays	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Tickets to seminars/events	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Video tutorials	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Print magazine subscription	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Digital magazine subscription	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Insurance	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4

11 Which of the following free items would you be most interested in receiving on the cover of Amateur Photographer? Please choose two

Buyers' guide supplement	<input type="checkbox"/> 1
Equipment supplement	<input type="checkbox"/> 2
Free gift (reflector, poster, etc)	<input type="checkbox"/> 3
Manufacturer/retailer brochure	<input type="checkbox"/> 4
Photography/tutorial DVD	<input type="checkbox"/> 5
Photography technique supplement	<input type="checkbox"/> 6
Software DVD	<input type="checkbox"/> 7
Technique supplement	<input type="checkbox"/> 8
Ideal free gift (please specify)	<input type="text"/> 9

Equipment

12 Which outlets would you consider buying photographic equipment from?

(Please tick all that apply)

Amazon	<input type="checkbox"/> 1	Jessops	<input type="checkbox"/> 1
Camera World	<input type="checkbox"/> 2	LCE	<input type="checkbox"/> 2
Clifton Cameras	<input type="checkbox"/> 3	Park Cameras	<input type="checkbox"/> 3
CVP	<input type="checkbox"/> 4	Premier Ink	<input type="checkbox"/> 4
Digital Depot	<input type="checkbox"/> 5	Reader ads in AP	<input type="checkbox"/> 5
eBay	<input type="checkbox"/> 6	SRS Microsystems	<input type="checkbox"/> 6
Ffordes Photographic	<input type="checkbox"/> 7	WEX	<input type="checkbox"/> 7
Gray's of Westminster	<input type="checkbox"/> 8		
Electrical retail chain (eg Currys/PC World)		<input type="checkbox"/> 8	
Other retail chain (eg Argos, John Lewis)		<input type="checkbox"/> 9	
Other (please specify)	<input type="text"/>		0
Independent retailer (please specify)	<input type="text"/>		x

13 When buying camera equipment, how important are each of the following?

	Very important	Quite important	Not very important	Not at all important
AP recommendation	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Brand	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Expert review	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Features	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Price	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
User review	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Visual appeal	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Other (please specify)	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4

14 Have you ever bought any products after seeing the adverts in Amateur Photographer?

Yes, manufacturers' adverts	<input type="checkbox"/> 1
Yes, retailers' adverts	<input type="checkbox"/> 2
Yes, catalogue	<input type="checkbox"/> 3
Yes, online advert	<input type="checkbox"/> 4
None	<input type="checkbox"/> 5

15 If yes, what did you buy? (Please tick all that apply)

Accessories	<input type="checkbox"/> 1
Compact camera	<input type="checkbox"/> 2
Compact system camera	<input type="checkbox"/> 3
Digital imaging software	<input type="checkbox"/> 4
Digital SLR	<input type="checkbox"/> 5
Inkjet printer	<input type="checkbox"/> 6
Lens	<input type="checkbox"/> 7
Other	<input type="checkbox"/> 8

16 Which of the following pieces of equipment do you own and which are you intending to buy?

	Own	Intend to buy
Bridge camera	<input type="checkbox"/> 1	<input type="checkbox"/> 1
Camera bag	<input type="checkbox"/> 2	<input type="checkbox"/> 2
Camera for video	<input type="checkbox"/> 3	<input type="checkbox"/> 3
Collectable kit	<input type="checkbox"/> 4	<input type="checkbox"/> 4
Compact system camera	<input type="checkbox"/> 5	<input type="checkbox"/> 5
Compact camera	<input type="checkbox"/> 6	<input type="checkbox"/> 6
Digital imaging software	<input type="checkbox"/> 7	<input type="checkbox"/> 7
Flashgun	<input type="checkbox"/> 8	<input type="checkbox"/> 8
Hard drive storage device	<input type="checkbox"/> 9	<input type="checkbox"/> 9
Lens	<input type="checkbox"/> 0	<input type="checkbox"/> 0
Medium-format camera	<input type="checkbox"/> x	<input type="checkbox"/> x
PC/laptop	<input type="checkbox"/> v	<input type="checkbox"/> v
Photo-quality printer	<input type="checkbox"/> 1	<input type="checkbox"/> 1
Scanner (film/flatbed)	<input type="checkbox"/> 2	<input type="checkbox"/> 2
Second-hand cameras	<input type="checkbox"/> 3	<input type="checkbox"/> 3
Second-hand lenses	<input type="checkbox"/> 4	<input type="checkbox"/> 4
SLR (digital)	<input type="checkbox"/> 5	<input type="checkbox"/> 5
SLR (film)	<input type="checkbox"/> 6	<input type="checkbox"/> 6
Studio kit	<input type="checkbox"/> 7	<input type="checkbox"/> 7
Tablet	<input type="checkbox"/> 8	<input type="checkbox"/> 8
Tripod/monopod	<input type="checkbox"/> 9	<input type="checkbox"/> 9

17 How many lenses do you own? (Please specify)

18 Do you own, or intend to buy, any of the following brands of camera?

	Own	Intend to buy in the next 12 months

whatdigitalcamera.com	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3
Other (please specify)	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3

23 Considering the photography websites that you visit, which of the following areas are most important to you? (Please tick all that apply)

Blogs by columnists/editorial team	<input type="checkbox"/> 1
Buying advice	<input type="checkbox"/> 2
Camera skills	<input type="checkbox"/> 3
Equipment tests and reviews	<input type="checkbox"/> 4
E-newsletter	<input type="checkbox"/> 5
Forums	<input type="checkbox"/> 6
General photography features	<input type="checkbox"/> 7
Image gallery	<input type="checkbox"/> 8
Interviews with photographers	<input type="checkbox"/> 9
News	<input type="checkbox"/> 0
Photography competitions	<input type="checkbox"/> 1
Questions and answers/help	<input type="checkbox"/> 2
Product review videos	<input type="checkbox"/> 3
User reviews	<input type="checkbox"/> 4
Video tutorials	<input type="checkbox"/> 5

24 Which of the following social media sites do you use?

Facebook	<input type="checkbox"/> 1
Twitter	<input type="checkbox"/> 2
Pinterest	<input type="checkbox"/> 3
Instagram	<input type="checkbox"/> 4
Flickr	<input type="checkbox"/> 5
YouTube	<input type="checkbox"/> 6
Vimeo	<input type="checkbox"/> 7
Google Plus	<input type="checkbox"/> 8
Tumblr	<input type="checkbox"/> 9
Other (please specify)	<input type="checkbox"/> 0

25 To what extent do you agree or disagree with each of the following statements?

	Agree strongly	Agree	Disagree	Disagree strongly
I prefer user views to expert views	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
I don't like to buy online as I prefer to see the equipment in person	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Magazine camera reviews are of a higher calibre than website camera reviews	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
I use price comparison sites to find the best deals	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
Website forums help me to interact with other photography enthusiasts	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
I prefer to buy equipment online as it is cheaper and easier	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4
When buying a camera I prefer to discuss face-to-face with a retailer	<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4

About you

26 How long have you been interested in photography?

1 year or less	<input type="checkbox"/> 1
2-3 years	<input type="checkbox"/> 2
4-5 years	<input type="checkbox"/> 3
6-10 years	<input type="checkbox"/> 4
11-20 years	<input type="checkbox"/> 5
21-29 years	<input type="checkbox"/> 6
30-39 years	<input type="checkbox"/> 7
40+ years	<input type="checkbox"/> 8

27 How would you describe your interest in photography?

Professional	<input type="checkbox"/> 1
Semi-professional	<input type="checkbox"/> 2
Enthusiast	<input type="checkbox"/> 3
Beginner	<input type="checkbox"/> 4
Occasional/holidays	<input type="checkbox"/> 5

Complete our reader survey and you could **WIN** a
Canon PowerShot SX520 HS

28 What other hobbies do you enjoy? Tick all that apply

Aeroplanes	<input type="checkbox"/> 1	Movies/film	<input type="checkbox"/> 1
Boating	<input type="checkbox"/> 2	Music	<input type="checkbox"/> 2
Cooking	<input type="checkbox"/> 3	Rambling	<input type="checkbox"/> 3
Equestrian	<input type="checkbox"/> 4	Rugby	<input type="checkbox"/> 4

MACRO PHOTOGRAPHY

SEMINAR WITH HEATHER ANGEL

Friday 28 November 2014
6-8.30pm at the Blue Fin
Building, 110 Southwark
Street, London SE1 0SU

ONLY
£39

Amateur
Photographer
WHATDIGITAL
Camera
SPI SCHOOL OF
PHOTOGRAPHIC
IMAGING

© HEATHER ANGEL

Due to popular demand, on **Friday 28 November 2014** we are delighted to welcome back **Heather Angel**, the renowned wildlife photographer with a passion for plants, mammals and macro photography.

See how reflectors, diffusers and fill flash help to improve macro shots in the field. Discover how to gain arresting macro still-life shots with

simple lighting – including window light, LED lights, fill flash and a light box. Examples of how depth of field is enhanced using focus stacking will also be shown and explained.

This exclusive seminar is held at the home of **Amateur Photographer** and **What Digital Camera** in the Blue Fin Building, rising above the impressive skyline of London's South Bank.

Tickets are sold on a first-come, first-served basis at £39 per head, to include a presentation and Q&A session with Heather Angel from 6pm to 8.30pm.

Book your place

EMAIL us at spiadmin@timeinc.com with the words 'HEATHER ANGEL SEMINAR' in the subject line. Please include your name, address and telephone number.

POST a cheque made payable to 'Time Inc. (UK) Ltd', to SPI Macro Seminar, IPC Media, 9th floor, Blue Fin Building, 110 Southwark Street, London SE1 0SU.

PLEASE INCLUDE YOUR NAME, ADDRESS, EMAIL AND TELEPHONE NUMBER

**Call 0203 148 4326
to pay by card**

£39 per person

Price includes: All talks/Q&As, glass of wine. Please note that the places are only confirmed upon receipt of payment. Tickets are non-refundable

For full details visit www.amateurphotographer.co.uk/macro or call 0203 148 4326

Despite the challenging metering scenario of a white subject in a dark setting, the camera exposed well for the entire scene

Sony Alpha 5100

With 24.3-million-pixels, 179-point hybrid autofocus and advanced video, is the **Sony Alpha 5100** the most high-tech, entry-level APS-C camera yet? **Jon Devo** finds out

Sony's latest compact camera model, the Sony Alpha 5100 features some of the Japanese firm's latest technology, including the 24.3-million-pixel Exmor APS HD CMOS sensor, with a sensitivity range of ISO 100-25,600 and the Bionz X processor seen in the more advanced Sony Alpha 6000. That camera's 179-point hybrid AF system has also made it inside the Alpha 5100's compact frame, delivering super-fast autofocus – claimed to be as quick as 0.06secs – making it one of the fastest cameras currently on the market.

Rather than updating the Sony Alpha 5000, which was released earlier this year, the Alpha 5100 instead replaces the Sony NEX-5T, the final NEX-branded camera in the compact range, which will now be discontinued. This move finally consolidates all Sony's E-mount

compact system cameras and Alpha-mount SLTs under the Sony Alpha branding.

Features

Looking at the spec sheet for the Alpha 5100, it's hard to see any weaknesses. It ticks most of the boxes that anyone in the market for a compact system camera could want, and in use, these features shine. The 179-point AF with touchscreen focus functionality covers over 90% of the frame and can deliver incredibly quick focusing responses. This is because each of the camera's AF points features on-chip phase detection, further enhanced by the inclusion of 25 precision contrast AF points positioned around the centre of the camera's 24.3-million-pixel sensor.

When shooting in low light, such opportunities can be better exploited with this camera's

sensitivity range of ISO 100-25,600, and Bionz X-enabled, area-specific noise reduction. However, a small pop-up flash with a guide number of 4m @ ISO 100 is also provided for shooting nearby subjects in extremely low light.

Video

Capable of recording full HD, 1920 x 1080-pixel movies in either cinematic 24 frames per second, or 50p/50i, the video recording capabilities of the Alpha 5100 surpass those of many DSLRs twice its size, and even its pricier relation, the Alpha 6000. This is because Sony has made it possible to record broadcast-quality XAVC S 25p footage at a high bit-rate of 50Mb/s, or Blu-ray quality AVCHD, while simultaneously recording in the less hefty MP4 codec for uploading straight to web or creating rush edits.

Data file

Sony Alpha 5100

Price	£549 (with kit lens)
Sensor	24.3-million-pixel, Exmor APS HD CMOS sensor
Output size	6000 x 4000 pixels
Focal length mag	1.5x
Lens mount	Sony E-mount
Shutter speeds	30-1/4000sec, plus bulb
ISO	100-25,600
Metering system	1,200-zone evaluative
Exposure compensation	±3EV in 1/3EV steps; Movies: ±2EV in 1/3EV steps
Drive mode	6fps continuous shooting
LCD	3in TFT with 921,600 dots
Viewfinder	No
AF points	Hybrid (179 phase-detection AF points)
Video	1920 x 1080 pixels at 50p/50i/25p
External mic	No
Power	NP-FW50 (up to 400 shots)
Memory card	Memory Stick Pro Duo, SDHC/SDXC UHS-I
Dimensions	109.6 x 62.8 x 35.7mm
Weight	283g (with battery and card)

Sony Alpha 5100

Resolution

From our test charts, the Alpha 5100 resolves around 3100 l/ph at ISO 100, which is much as we'd expect for a 24.3-million-pixel sensor with a low-pass filter. Resolution drops progressively as the sensitivity is increased and noise reduction comes into play, to around 2500 l/ph at ISO 1600 and 2000 l/ph at ISO 25,600.

Dynamic range

As we'd expect, the Alpha 5100 gives essentially identical results to the Alpha 6000. At ISO 100, it offers a very respectable 12.2EV range, which gives plenty of scope for extracting more shadow detail from raw files. At ISO 1600, it's still very respectable at over 9EV, but at higher sensitivities, increasing shadow noise reduces the range.

Noise

Low-ISO images are extremely clean, but luminance noise starts to creep in at ISO 800 and above. Both chroma noise and noise reduction artefacts become increasingly visible at higher sensitivities, with ISO 6400 and higher looking very noisy indeed, and best used only when absolutely necessary. In practice, ISO 1600-3200 enabled us to use fast-enough shutter speeds to freeze fast-moving subjects in low-light conditions.

Professional video makers can also use the Alpha 5100 to film uncompressed 8-bit 4:2:2 video using an external recording device connected via the clean HDMI port provided.

The only drawback is the lack of an input for an external microphone, but it is common for professionals to record audio separately so this may not be an issue for some.

Build and handling

Considering what has been packed into the Alpha 5100, it's quite astonishing that Sony has managed to keep it so compact. Physically, it's identical to the Alpha 5000, the world's smallest APS-C-format camera, but weighs a fraction more. Yet due to its plastic construction, it only weighs 283g with a card and battery loaded, so it should fit comfortably into most jacket pockets when mounted with its kit lens. The Alpha 5100 is also comfortable enough when worn around the neck all day.

It's distinctly obvious that this camera has been built to a price, but with that said, it doesn't feel overly cheap. Its plastic exterior is tough and the plastic grip has a leatherised texture that is easy to hold when shooting, although a slightly deeper grip would have been ideal.

Capturing images on its 3in, 921,600-dot LCD screen can be done with the screen tilted upwards, or front-facing when taking self-portraits. It's also possible to use the screen to point-focus and shoot, although touchscreen functionality is limited to taking pictures only. In use, the touchscreen is highly responsive, though it's a shame that it wasn't enabled during playback mode, at least for pinch-zoom and scrolling through images.

Performance

The speed and accuracy of the Alpha 5100's autofocus is what really stands out. In my brief

At ISO 3200, the camera handles noise very well and captures a good level of fine detail

Images captured by this camera in standard colour mode are faithful to the colours in the scene

time using this camera with the Sony E PZ 16-50mm f/3.5-5.6 OSS kit lens, I didn't get a single out-of-focus shot. With a half-press of the shutter button, the camera actuates its focusing motors almost instantaneously and locks on to your target stubbornly when continuous AF is engaged. It's possible to adjust AF drive speed and tracking separately: drive can be set to fast, normal and slow, while tracking duration can be set to normal and high.

I tested the AF tracking ability of the Alpha 5100 during a basketball match where players move at a fast pace and play can be challenging to predict. Even in the low-light conditions of an indoor basketball court, the camera tenaciously held onto the subjects that I had initially focused on, enabling me to capture sharp action shots.

Despite the camera's limited number of physical controls and lack of full touchscreen functionality, navigating and operating the Alpha 5100 is very straightforward thanks to Sony's simplified and user-friendly interface.

Pressing the centre button allows you to select from PASM modes, as well as scene, intelligent and superior auto modes, panoramic shooting and movie recording, using the multifunctional rear dial, while the inclusion of a power zoom lever on the shoulder of the camera makes it fully operable with just one hand.

Meanwhile, Wi-Fi and NFC connectivity open up the possibilities of wireless shooting, as well as sending images straight to a tablet or similar compatible device for improved image reviewing. I not only found these functions easy to set up, but image transfer speeds proved to be remarkably quick.

Our verdict

GIVEN THAT this camera shares many of its core components with the Alpha 6000, I expected it to deliver the same superb image quality and it did not disappoint, ticking that box emphatically but at a more affordable price point.

Sony's E-mount system now has something for everybody: the Alpha 5100 takes the impressive image-capturing technology from the more advanced Alpha 6000 and places it inside a truly compact body that has a simple and easy-to-use interface.

If you don't need a viewfinder or the extra control dials of the Alpha 6000, but want more advanced stills and video capturing capabilities than those offered by the Alpha 5000 – particularly the

higher-resolution sensor and superior autofocus and tracking performance – the Alpha 5100 is a camera seriously worth considering. For those needing quick AF and great video, it offers some top tech at a highly competitive price.

For and against

- + Superb resolution and autofocus speed
- Only six frames per second continuous shooting
- + Lightweight, but tough with a compact body
- Touchscreen limited to taking pictures only
- + Advanced video filming capabilities
- No input for external microphone

Focal points

The Sony Alpha 5100 boasts a raft of features aimed at those who thrive on the latest tech

PlayMemories

The PlayMemories mobile app from Sony allows you to shoot wirelessly and transfer images to compatible smartphones and tablets.

Dual video

Record full HD 1920 x 1080-pixel video while simultaneously recording in MP4 codec.

Front-facing screen

Taking self-portraits is made much easier thanks to the Alpha 5100's 180° flip screen.

E mount

Making use of Sony's E-mount lens family, this is one of the world's smallest interchangeable-lens cameras with an APS-C-sized sensor.

Touchscreen

Touch-focusing and shooting is highly responsive, but it is limited to shooting only.

Apps

Downloadable apps via the in-camera PlayMemories menu can expand the functionality of the camera, adding features such as time-lapse, star trail and motion shot.

Squaring the circle

Q If the camera lens is circular, then why do the pictures come out square?

Navin K

A The short answer is that the shape of the pictures we take today is a reflection of the sensors that record our images, not the lenses, which are circular because that shape optimises their light-gathering properties.

But then that throws back the question: why are sensors not made circular to produce circular images? There are two possible answers. Firstly, our brains are used to processing the world in a horizontal format. Rectangular and square formats closely match a view that is more familiar to us and, as a result, the aspect ratios that reflect our natural field of view became the popular formats.

There's also the practicality of creating circular sensors that produce circular images, the time and manufacturing wastage from cutting out circular film, and the fact that developing circular-shaped circuit boards or printing in circles wouldn't be financially sensible. It's possible, but it wouldn't be practical. **Jon Devo**

Unknown company

Q At the rear of an issue of AP, I found a half-page advertisement for UKphotodistro Ltd. As the company name is new to me, and being interested in a carbon-fibre gimbal head, I checked out whether it was a genuine UK company, but I couldn't find many details about it so I don't know whether to go ahead with my purchase or not. Can you give me any details about this company.

Malcolm Stewart

A UKphotodistro Ltd is a small business located in Ayrshire that stocks a wide

Better action shots

Q My son is a sports fanatic and plays hockey, squash and basketball. I often watch him play but when I try to take pictures of him, the end result is often too blurry or too dark. I've been told the use of flash is forbidden at these venues, so how can I get better photos of him playing sport?

Jade Wright

A Most of these sports are played indoors, so your main issue is shooting in low light, compounded by the difficulty of capturing the action. Flash is often not allowed at sporting events because it can be off-putting for the players, so that's probably why you've been advised against it.

What you need to do is balance the often poor or patchy lighting inside indoor sporting venues with a fast enough shutter speed to freeze the action. The best way to do this is use a wide aperture and a high sensitivity of ISO 1200-3200, or you could experiment using an ISO setting higher than this if you have a camera that is capable of doing so. This will allow you to use a shutter speed in

Using a wide aperture and a higher ISO can help your sports shots

excess of 1/320sec and should help you to avoid getting blurry or soft results.

When I shoot indoor sports, my typical settings are 1/500-1/800sec shutter speed, f/2.8-4 aperture, and

ISO 1600-3200. You will need a camera that is capable of high ISO shooting and a lens with a wide aperture. The Sony Alpha 5100 fits the bill, and is an affordable camera worth considering. **Jon Devo**

range of products from a number of renowned manufacturers. Although it doesn't operate on such a grand scale like some of the larger photographic retailers, it is a genuine company that works out of an operational warehouse and stocks a vast selection of innovative photographic accessories. The company's website is www.ukphotodistro.co.uk and it can be contacted via service@ukphotodistro.co.uk, or call 0845 287 0710. **Michael Topham**

Zoom question

Q I am advised that, with digital zoom lenses, it is important to always frame the subject before focusing; never to focus at the long end, hold that focus and zoom out to frame. I seem to recall shooting with film lenses meant focusing manually at the long end for accuracy, then widening out to frame. I use a Nikon D5000 with Nikkor DX 16-85mm and Sigma 10-20mm lenses. **Ron Ellis**

A What you've been told is correct. Zoom lenses come in two types – 'parfocal' lenses maintain the same focus distance when zooming, and 'varifocals' change focus when zooming. Almost all modern zoom lenses are varifocal, which means that they should be focused at the focal length for the picture taken. Zooming in to focus, then out again to shoot, will result in out-of-focus pictures. **Andy Westlake**

100000+ DIGITAL MAGAZINES
WWW.PDFMAGAZINES.ORG

My life in cameras

Landscape photographer Colin Roberts reveals the cameras that have shaped his photographic life

Colin Roberts

Award-winning Colin Roberts took up photography in the 1980s and specialised in landscapes and nature. He won Amateur Photographer of the Year in 2004 and turned professional in 2005. He has since travelled throughout

Britain in pursuit of his work. His first book, *Glorious Hampshire*, will be published in November.

1985 Nikon F3

My first camera was an Olympus Trip, but in my early 20s my father insisted I should have a better camera to pursue my photography, and treated me to a Nikon F3. For me, the F3 was a milestone: I was able to work creatively for the first time with a wide range of fine lenses, using filters and special techniques like long exposures and double exposures. Usually loaded with Kodachrome 25, I found that I could capture pin-sharp landscapes that are actually still in my library all these years later.

1991 Mamiya RZ67

While 35mm could deliver great quality, there was a general view that medium format had an advantage when it came to getting work published. I was tempted by the advanced features of the hefty RZ67 – it had a revolving film back and bellows focusing. It was a fine camera, but sadly we never really hit it off. My love of landscapes takes me rambling regularly through the countryside, and the RZ67 was really more suited to studio than outdoors work.

1995 Pentax 645

In the Pentax 645 I found a camera that really did handle like a 35mm SLR, but delivered the increased quality that medium format was able to provide. My full 645 kit, including three lenses, fitted snugly into my old 35mm bag and I was free to roam once again. The only drawback was that there was no mirror lock-up facility, meaning that there was a risk of camera shake that could show up in macro shots.

2005 Canon EOS-1Ds Mark II

This was a real leap in the dark. Until 2005, I had never used a digital camera and had no interest in Photoshop. However, the camera's 16.7-million-pixel, full-frame sensor gave it the potential to match Fujichrome Velvia, so I took the plunge. The downside was the camera's weight. By moving to 35mm, I was expecting lighter, but the digital body felt as heavy as the medium-format Pentax camera.

2013 Canon EOS 6D

I may have found my ultimate camera in the EOS 6D – lightweight, trim, full of features, and with a full-frame sensor that gives me more pixels than I ever need. It is now 18 months old and has certainly been put through its paces, but has never faltered. Strangely, part of my Nikon kit still lives on – to this day my 20mm Nikkor lens (circa 1989) is still my wideangle lens of choice, and I mount it on my EOS 6D using a specially made adapter.

BLAST FROM THE PAST

Exakta Varex IIb

Ivor Matanle describes the incomparable Exakta Varex IIb

LAUNCHED 1964

PRICE AT LAUNCH Approx £81 14s 5d (with 50mm f/2.8 Zeiss Tessar lens)

GUIDE PRICE TODAY £35-£65 (with 80mm Tessar lens); £15-£35 (body only)

THE EXAKTA Varex IIb was the 1964 incarnation of the vast Exakta SLR system, which originated in Dresden in 1936 with the Kine-Exakta, the world's first 35mm SLR camera. Exakta equipment had a huge following in the scientific community and among advanced amateur photographers, many of whom still use their Exaktas.

What's good Solid reliability and precision. Shutter speeds of 12-1/1000sec, variable delayed action times. Interchangeable viewfinders, screens and lenses. Huge range of Exakta bayonet-mount lenses and accessories available. Ready availability second-hand.

What's bad Difficult to get accustomed to: wind and fire with left hand, focus with right; load film right to left, complex system for setting slow speeds and delayed action, which young dealers rarely understand, so condition descriptions are often unreliable.

Professor Newman on...

Back to the future

Nikon's 1 V3 redesign may be an upgrade, yet it clearly draws its influences from the beloved 1960s F model

The design of the Nikon 1 V3 seemed to be an about-face from its predecessor. While the V2 had been designed to appear as a miniature DSLR, albeit a rather angular one, the V3 looks much like any mirrorless interchangeable-lens camera, essentially a plain box with a lens on the front and an LCD on the back. The built-in, eye-level viewfinder of the V1 and V2 had gone, replaced with a detachable electronic finder, fitting into the accessory shoe at the top. Similarly, the big, blocky, built-in grip of the V2 has been replaced with an add-on grip. At first sight, this appears to be a radical change, but I sense the development of a theme by the industrial designers involved.

Often it is assumed that the design and specification of a commodity like a camera is due to engineers. In practice, industrial designers are at least as influential, and those skills are usually gained at schools of art and design, not engineering. Having worked with industrial designers on product developments, I have gained at least a working knowledge of how they operate. Almost invariably, when brought in at the start of the project, they will make a presentation of the

The detachable viewfinder of the Nikon F required expensive mechanical and optical linkages...

'The V3 can be transformed into a DSLR lookalike by the addition of the viewfinder'

influences that they propose will shape the product design. In the case of a computer system I designed, the industrial designer's influence was the film *Alien* (yes, really), but in the case of the V2, it was more obviously Nikon's first professional reflex camera, the F of 1969. The Nikon F, particularly the Photomic model, was characterised by its big, blocky reflex viewfinder housing, and this was clearly echoed in the similarly oversized and angular reflex housing of the V2.

...whereas that for the V3 requires only a cheap-to-implement electronic connection

So while that link appears obvious, it seems to me that the V3 also draws its influence from the Nikon F. While the camera by itself looks like a standard mirrorless, interchangeable-lens camera,

it can be transformed into a DSLR lookalike by the addition of the viewfinder and grip.

This was just the same with the Nikon F. One of the reasons that the viewfinder was so prominent was that it was removable. With the alternative waist-level viewfinder, the F looked less like a traditional SLR. The F was also one of the first cameras to accept a motor drive, which changed the quite compact camera into a behemoth 'professional' workhorse.

Since the F was a mechanical system, the addition of these parts required some complicated engineering, putting in mechanical links to link viewfinder for shutter and aperture controls, and a drive linkage for the motor drive. The result was that the F was among the most expensive cameras of its day. As a primarily electronic system, the V3 can link these add-ons with a simple electrical connector.

PRINTER INK CARTRIDGES

EPSON

COMPATIBLE & ORIGINAL INK

At Premier Ink Supplies, we stock two types of cartridges for Epson printers - **Originals**, which are made by Epson, and **Compatibles**, which are made by a UK company called **Jet Tec**. Using **Jet Tec Compatibles** is a way of saving money, without compromising on the quality of your prints. Here're the results from two **independent** ink tests that agree...

Digital
PHOTOGRAPHY

Ink Test Winner

"Jet Tec's colours were superb, with single greys and blacks very close to Epson ...so Jet Tec wins!"
- Total Digital Photography Magazine

"What we're looking at here is not only the best choice of ink for the R300 printer, but also the best ink in this group test, period. There's just no getting away from the superb combination of performance and pricing!"
- Computer Upgrade Magazine

SQUARE FILTERS

KOOD P-Type Filter System

The P-Type square/rectangular filter system consists of three parts:
1) An adapter ring that screws onto the front of your lens
2) A filter holder clips onto the ring
3) One or more P-Type (84mm wide) filters

KOOD square filters are manufactured in the UK, and are fully compatible with the Cokin P-Type filter system

New Online Papers Ilford Options Test Pack...2 sheets of 5 alternative brands to 'Ilford Pearl' ...only £3.99

As seen at The Birdfair Rutland Water

TREKKING

Winner of a gold medal at the Geneva Salon des Inventions

- Spreads the weight of the camera across the back, leaving your hands free and your neck free of pain.
- Also takes binoculars at chest level.
- Padded with two small pockets that are accessible whilst wearing it to store memory cards or batteries.
- Camera remains free moving yet secure: when bending down the camera stays close to the body
- Further straps can be added to turn it into a cross system (not included) or to carry a camera on each side of the body.

Especially useful when using long or heavy lenses

STRAPS FROM £12.99 HARNESSES FROM £28.99

RK PHOTO sell the full range of Trekking products: details below

Swab

A range of swabs are available, use them to apply our cleaning liquids.

There are swabs in all sizes from micro 4/3rds through full frame to medium format.

Our orange swabs are recommended and safe to use for cameras without an anti aliasing filter.

There are also swabs available for specialist uses.

These include corner swabs, digital back swabs and focusing screen swabs. All are designed to make this delicate task as easy as possible.

View

Quasar and Mini Quasar loupes make the job of identifying dust and grease on your sensor as safe and easy as possible

Swablight is the latest innovation in the sensor cleaning range. This small and compact light can be focused to clearly show where dust is lurking, and a swab can be fitted directly to the unit so precise cleaning can be carried out. *So portable it should go everywhere with you!*

Dust

For removing dust and similar debris, our Arctic Butterfly range of brushes are a proven success. They are available in sizes to suit all sensors.

Zeeion blowers are ideal for removing dust from inside shutter chambers.

Flexodome. Use your Zeeion blower with complete confidence! Allows you to position the blower to reach those 'hard to clear' areas in your digital SLR.

Clean

VisibleDust liquid cleaners (Sensor Clean, Smear Away and VDust Plus) are safe to use on all current camera sensors. It is recommended that VDust Plus is only used with our Orange series of swabs.

Sensor Clean is for light stains, whilst Smear Away is for more stubborn stains caused by oil and lubricants, our Green swabs are best for use with these liquid cleaners.

Photographica Auctions 2014 Express - 25 September Fine - 23 October

Fine mahogany and brass cameras and lenses, sold for £4,120 in our last sale

On 17 July, Special Auction Services realised more than £15,000 for cameras and images from the collection of The Earl of Lichfield, internationally renowned photographer. Our Express sale on 25 September includes a huge collection of cameras, lenses, repair stock and parts from a long-established shop – over 700 lots in all. Our Fine sale on 23 October includes a rare Nikon I, lenses by Dallmeyer, Taylor Hobson and Ross and a Gandolfi 10 x 8 outfit, as well as equipment by Leica, Rollei, Hasselblad, Alpa, Nikon, Zeiss and many others – over 300 lots in all.

We are currently taking in consignments for our upcoming auctions and are now the largest camera auction house in the United Kingdom. For our recent sales we have travelled all over the country collecting cameras and photographs of all types and values, which we sell to buyers around the world.

For further information, or to get a valuation, please contact Jonathan Brown or Hugo Marsh on:
+ (0)1635 580595 or hugo@specialauctionservices.com

Final Analysis

Roger Hicks considers...

'Lady 1' (c2008) by Cécile Decorniquet

Is this surrealism? Not exactly. It's a little girl dressed up as a late Victorian or Edwardian society beauty, photographed in formal studio style, in colour. Maybe it is surrealism, then. Little girls are one thing; society ladies in vintage sepia portraits are quite another – and colour is yet another again.

Surrealism makes us look twice: it makes us wonder if we are really seeing what we think we are seeing. It combines familiar elements in unfamiliar ways. Why don't little girls wear heavy make-up and elaborate hats? Did they ever do so? Why at one time did big girls wear heavy make-up and elaborate hats? Why did they (mostly) drop the hats?

In its nature, surrealism is multifaceted. It cannot be otherwise. It makes a living, as it were, out of being unexpected. As soon as it is expected, it ceases to be surreal.

Waifs and victims

Cartier-Bresson's famous picture of a man jumping over a puddle is surreal. There is nowhere for him to land. But puddles are seldom deep enough to drown in. Cartier-Bresson's puddle jumper, and Decorniquet's picture here, are examples of the best kind of surrealism. They are not badly assembled Photoshop composites. They are straight photographs. Except that somehow – they're not.

You have to take the studio lighting and the photographic technique for granted. Learning how to take formal portraits can involve hours of tedious practice in the studio, much as musicians practise when they are not performing.

Decorniquet has clearly put in the hours. I first met her at

© CÉCILE DECORNIQUET

'They are examples of the best kind of surrealism. They are straight photographs, not badly assembled Photoshop composites'

Arles in 2009, when she exhibited the Children series with Fetart, then again in 2013 when she won the SFR Young Photographers' Prize. We've never talked about kit. It's not true that professionals and fine-art photographers never talk about cameras and lenses,

but it is true that women talk a lot less about equipment than men. Instead, we discussed how tired she was of seeing children portrayed as waifs and victims, and how this had prompted her to do two parallel series, one with children as innocents and one with them as society ladies.

She acknowledges the parallel influences of Julia Margaret Cameron and Lewis Carroll, but the pictures are quite her own.

Could you do something similar? Of course, if you're good enough and able to organise everything you need: the studio, make-up, hair stylist, clothes. But why would you? Why would you not imagine your own ideas? Why not realise those instead? Photography is ideas, not just technique.

AP

Roger Hicks has been writing about photography since 1981 and has published more than three dozen books on the subject, many in partnership with his wife Frances Schultz (Visit his website at www.rogerandfrances.com.) Every week in this column Roger deconstructs a classic or contemporary photograph. Next week he considers an image by Raghu Rai

The latest **NEW PRODUCTS** this Autumn
